The entire population of Guinea-Bissau is at high risk of malaria. The annual reported number of malaria cases in 2013 was 132,176 with 418 deaths.
Guinea-Bissau ALMA Quarterly Report
Quarter One, 2015

Progress
Guinea-Bissau has made progress in scaling-up anti-malarial interventions and has banned the import and sale of oral artemisinin-based monotherapies. The country has achieved universal coverage of LLINs. The country has also achieved high coverage of the tracer MNCH interventions of DPT3 and vitamin A coverage and has increased coverage of PMTCT. Guinea-Bissau was awarded a 2015 ALMA Award for Excellence in Implementation of Vector Control.

Impact
The annual reported number of malaria cases in 2013 was 132,176 with 418 deaths.

Recommended Actions
Guinea-Bissau has responded positively to the recommended actions addressing low coverage of exclusive breastfeeding, policy on Community Case Management of pneumonia, and lack of data on postnatal care and Community Case Management of malaria, and continues to track progress as these actions are implemented.
