The entire population of Ghana is at risk of malaria. The annual reported number of malaria cases in 2017 was 10,228,988 with 599 deaths.
Malaria

Progress
Ghana has secured sufficient resources for the essential anti-malarial commodities required to sustain coverage in 2019 and has achieved 100% operational coverage of vector control. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. Ghana has scaled up coverage of iCCM. Ghana has further increased its already high rating in terms of public sector management systems (CPIA cluster D). The country has significantly enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Elimination Scorecard. The country is also showing leadership in malaria control through its participation in the High Burden High Impact approach.

Impact
The annual reported number of malaria cases in 2017 was 10,228,988 with 599 deaths.

Key Challenges
• Insecticide resistance threatens vector control effectiveness.
• Gaps in funding to allow IRS and SMC scale up.

RMNCAH and NTDs

Progress
The country has achieved high coverage of tracer RMNCAH interventions, in particular exclusive breastfeeding, DPT3 and postnatal care. The country has significantly enhanced the tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn and Child Health Scorecard, including with the introduction of community level scorecards.

Progress in addressing Neglected Tropical Diseases (NTDs) in Ghana is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Ghana is high for trachoma (100%), good for onchocerciasis (55%), and lymphatic filariasis (49%); and, low for schistosomiasis (25%) and for soil transmitted helminths (11%). Overall, the NTD preventive chemotherapy coverage index for Ghana in 2017 is 37, which represents a very substantial decrease compared with the 2016 index value (70).
