### Progress

Eritrea has made significant progress in scaling-up malaria control interventions. The country has been successful in attracting resources through the Global Fund. Additionally, the country has made policy changes including the banning of oral artemisinin-based monotherapies and the introduction of a policy of Community Case Management of malaria and pneumonia. The country secured sufficient financing to maintain universal coverage of key anti-malarial interventions in 2014. Eritrea has achieved impressive coverage of DPT3 and exclusive breastfeeding. Eritrea has achieved a 65% reduction in under-five child mortality since 1990.

### Impact

Eritrea has made significant progress in malaria prevention and control. The number of malaria cases (probable and confirmed) has decreased from 125,746 in 2001 to 42,178 in 2012. In the same period, malaria admissions (inpatient cases) declined from 10,886 to 6,780 and deaths from 133 to 30. As such, the country is on track to achieve a 75% decrease in malaria incidence 2000-2015.

### Key Challenge

- Delays in procurement of LLINs to sustain universal coverage.
