The entire population of Togo is at high risk of malaria. The annual reported number of malaria cases in 2012 was 697,374 with 1,197 deaths.
Progress
Togo confirmed the banning of oral artemisinin-based monotherapies and has introduced policies for Community Case Management of malaria and pneumonia. The country has procured sufficient LLINs to achieve universal vector control coverage. Togo continues to make progress on tracer MNCH interventions, with high coverage in DPT3 vaccinations, PMTCT, and exclusive breastfeeding and has increased coverage of vitamin A.

Impact
The annual reported number of malaria cases in 2012 was 697,374 with 1,197 deaths. Progress in reducing cases has been reported sub-nationally where interventions have been intensified.
