The annual reported number of malaria cases in 2017 was 398,377.
Malaria

Progress
Senegal has implemented iCCM country wide. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. Senegal has secured sufficient resources to sustain universal coverage of essential malaria control interventions in 2019 and has distributed sufficient LLINs to achieve universal operational coverage of LLINs. Senegal has significantly enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control and Elimination Scorecard. Senegal has put in place strong public sector management systems and has achieved a rating of 3.6 for Cluster D CPIA.

Impact
The annual reported number of malaria cases in 2017 was 398,377.

Key Challenge
- Reported increase in cases between 2010 and 2016.

Previous Key Recommended Action
The country has responded positively to the recommended action on the need to investigate and address the reasons for the estimated malaria incidence between 2010 and 2017.

RMNCAH and NTDs

Progress
Senegal has achieved high coverage of the tracer RMNCAH interventions DPT3 and postnatal care, and has recently increased coverage of ARTs in children and the total population, as well as skilled birth attendants. The country has enhanced the tracking and accountability mechanisms with the development of the Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in Senegal is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Senegal is high for schistosomiasis (91%), good for lymphatic filariasis (71%) and for trachoma (70%), with coverage for soil transmitted helminths at 57%, and for onchocerciasis at 48%. Overall, the NTD preventive chemotherapy coverage index for Senegal in 2017 is 66, which represents a big increase compared with the 2016 index value (44).

Previous Key Recommended Action
Senegal responded positively to the RMNCAH recommended actions addressing low coverage of ARTs in children, with increased coverage recently achieved.

New Key Recommended Action
