

Scorecard for Accountability and Action

Malaria transmission is confined to the north-east part of Namibia where malaria is endemic and about 72% of the population of the country is at risk. The annual reported number of malaria cases in 2011 was 3,163 with four deaths.

Metrics

Policy and Financial Control	
Oral Artemisinin Based Monotherapy Ban status (2014)	
Community case management (Pneumonia)	
Community case management (Malaria)	
World Bank rating on public sector mgmt and institutions 2013 (CPIA Cluster D)	
Commodities Financed, Implementation and Malaria Impact	
IRS financing 2014 (% of at-risk population)	100
Public sector RDT financing 2014 projection (% of need)	100
Public sector ACT financing 2014 projection (% of need)	100
IRS Operational Coverage (%)	94
On track in 2012 to Reduce Malaria Incidence by >75% by 2015 (vs 2000)	
Tracer Indicators for Maternal and Child Health	
PMTCT coverage 2013 (% pregnant HIV pts receiving ARVs)	90
% deliveries assisted by skilled birth attendant	88
Exclusive breastfeeding (% children < 6 months)	49
Vitamin A Coverage 2012 (2 doses)	
DPT3 coverage 2012 (vaccination among 12-23 month olds)	84
Postnatal care (within 48 hrs)	65

Namibia ALMA Quarterly Report Quarter Three, 2014

Progress

Namibia has banned oral artemisinin-based monotherapies. Namibia has done well in mobilising resources for malaria control. Adequate funding for the required number of anti-malarial drugs, RDTs, LLINs, and IRS has been secured for 2014. Namibia has made significant progress in scaling-up malaria control interventions and has, in particular, sustained high levels of IRS whilst rolling out LLINs and expanded to universal parasitological diagnosis and treatment. The country has good coverage of tracer MNCH interventions, particularly PMTCT, DPT3 vaccination, and postnatal care. The country has recently increased coverage of exclusive breastfeeding and skilled birth attendants. Namibia was awarded a 2014 ALMA Award for Excellence in Implementation of Vector Control. Namibia's success in malaria control is reflected in the country's inclusion in the SADC Elimination Scorecard, launched in May 2014. The country has significantly enhanced the tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn and Child Health Scorecard.

Impact

Namibia has made significant progress in the fight against malaria. The number of probable and confirmed malaria cases reported annually decreased from 480,515 during 2001–2005 to only 3,163 cases in 2012. During the same period, a similar trend was observed in deaths: malaria deaths fell from 1,370 to four. As such, the country has achieved the global target of more than a 75% reduction in the malaria burden since 2000.

Key Challenge

- Maintaining malaria high on the political and funding agenda as the disease burden continues to drop.

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Address funding	Ensure the NFM concept note is submitted by Q4 2014 and ensure that resources are allocated to malaria control at a level that is sufficient to sustain the gains made in recent years	Q4 2014		Deliverable not yet due
