Malaria transmission is most intense in the south whilst the desert areas in the north are malaria-free. The annual reported number of malaria cases in 2012 was 3,525,112 with 2,825 deaths.
Progress
Niger has banned the import and sale of oral artemisinin-based monotherapies and has introduced policies on Community Case Management of malaria and pneumonia. The country has achieved high coverage of the tracer MNCH intervention, vitamin A. The country has committed domestic resources to significantly close gaps in malaria intervention coverage and has sufficient financing to procure and distribute the majority of the ACTs, RDTs, and LLINs required for 2014. Niger has achieved MDG4 by reducing under-five child mortality by over two-thirds since 1990.

Impact
The annual reported number of malaria cases in 2012 was 3,525,112 with 2,825 deaths.

Key Challenge
- Delays in LLIN procurement may delay the universal coverage campaign in 2014.
