The annual reported number of malaria cases in 2013 was 939,076 with 409 deaths.
Rwanda ALMA Quarterly Report
Quarter Three, 2015

Progress
Rwanda has made significant progress in scaling-up malaria control interventions, including in key policy areas: banning oral artemisinin-based monotherapies and introduction of policies on Community Case Management of malaria and pneumonia. Rwanda has also achieved high coverage of tracer MNCH interventions, including PMTCT, exclusive breastfeeding and DPT3 vaccination and has recently increased coverage of postnatal care and skilled birth attendants. Rwanda has achieved MDG4 by reducing under-five child mortality by over two-thirds since 1990.

Impact
There has been a significant decline in malaria cases and deaths in Rwanda with 939,076 cases and 409 deaths reported in 2013. Rwanda has achieved the target of 75% reduction in malaria incidence since 2000.

Recommended Actions
Rwanda has responded positively to the recommended actions addressing low coverage of vitamin A and postnatal care, with coverage of the latter having recently increased, and continues to track progress as these actions are implemented.
