

### Scorecard for Accountability and Action

In Cabo Verde, 58% of the population lives in areas where there is a low risk of malaria; the rest of the country is malaria-free. The annual reported number of malaria cases in 2017 was 892 with one death.

#### Metrics

Commodities Financed and Financial Control		
IRS financing 2019 (% of at-risk population)	Not on track	39
Public sector RDT financing 2019 projection (% of need)	Progress but more effort required	43
Public sector ACT financing 2019 projection (% of need)	Target achieved or on track	100
World Bank rating on public sector management and institutions 2018 (CPIA Cluster D)	Target achieved or on track	4.0
Insecticide Resistance Monitoring, Implementation and Impact		
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	Progress but more effort required	1
Insecticide resistance monitored since 2015 and data reported to WHO	Target achieved or on track	
National Insecticide Resistance Monitoring and Management Plan	Target achieved or on track	
Scale of Implementation of iCCM (2017)	Not applicable	
IRS Operational Coverage (%)	Target achieved or on track	80
Change in Estimated Malaria Incidence(2010–2017)	Not on track	
Change in Estimated Malaria Mortality rate(2010–2017)	Progress but more effort required	
Tracer Indicators for Maternal and Child Health and NTDs		
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2017)	No data	
Estimated % of Total Population living with HIV who have access to antiretroviral therapy (2018)	Target achieved or on track	89
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2018)	No data	
% deliveries assisted by skilled birth attendant	Target achieved or on track	93
Postnatal care (within 48 hrs)	No data	
Exclusive breastfeeding (% children < 6 months)	Target achieved or on track	60
Vitamin A Coverage 2017 (2 doses)	No data	
DPT3 coverage 2018 (vaccination among 0-11 month olds)	Target achieved or on track	98

## **Malaria**

### **Progress**

WHO has identified Cabo Verde as being a country with the potential to eliminate local transmission of malaria by 2020. The country has completed the insecticide resistance management and implementation plan and has submitted insecticide resistance data to WHO. Cabo Verde has a high rating in terms of public sector management systems (CPIA cluster D). The country has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Elimination Scorecard.

### **Impact**

The annual reported number of malaria cases in 2017 was 892 with one death. Cabo Verde experienced a significant increase in malaria cases and deaths in 2017 and investigated and addressed the underlying reason for this upsurge.

### **Key Challenges**

- Sustaining malaria control gains as the country prepares for elimination.
- Malaria upsurges were reported in 2016 and 2017.

### **Previous Key Recommended Actions**

<b>Objective</b>	<b>Action Item</b>	<b>Suggested completion timeframe</b>	<b>Progress</b>	<b>Comments - key activities/accomplishments since last quarterly report</b>
Vector Control	Address the decreasing IRS coverage	Q4 2019		The country reports that it has increased IRS coverage from 77% to 80% and is working with the communities to increase acceptance of IRS for increased coverage

The country has addressed the previous recommended action concerning the control of the malaria upsurges reported in 2017. Cabo Verde targeted its vector control efforts to affected neighbourhoods and as a result, the country has been malaria-free since January 2018.

## **RMNCAH and NTDs**

### **Progress**

The country has achieved high coverage of the tracer RMNCAH interventions, DPT3 vaccination, skilled birth attendants, exclusive breastfeeding and coverage of ARTs in the total population.

Progress in addressing Neglected Tropical Diseases (NTDs) in Cabo Verde is measured using preventive chemotherapy coverage achieved for soil transmitted helminths. The country report that they have submitted their Soil Transmitted Helminths data with a reported coverage of 98% for children in schools and nurseries.

### **Previous Key Recommended Actions**

Cabo Verde has responded positively to the RMNCAH recommended actions addressing lack of data on postnatal care, ART coverage in children and vitamin A and continues to track progress as these actions are implemented.
