Malaria transmission occurs year-round in Cameroon and is most intense in the south of the country. The annual reported number of malaria cases in 2017 was 2,488,993 with 3,195 deaths.
Malaria Progress
Cameroon secured most of the resources to cover the costs of the ACTs and RDTs needed in 2019. Cameroon has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. Cameroon has enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control Scorecard. The country is also showing leadership in malaria control through its participation in the High Burden High Impact approach.

Impact
The annual reported number of malaria cases in 2017 was 2,488,993 with 3,195 deaths.

Key Challenges
- Insecticide resistance.
- Delays in the completion of the universal coverage campaign.

RMNCAH and NTDs Progress
Progress in addressing Neglected Tropical Diseases (NTDs) in Cameroon is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Cameroon is high for schistosomiasis (100%), trachoma (100%); soil transmitted helminths (85%); and good for onchocerciasis (71%) and lymphatic filariasis (60%). Overall, the NTD preventive chemotherapy coverage index for Cameroon in 2017 is 82 and this represents a substantial increase compared with the 2016 index value (58).
