Malaria transmission in Sudan is low-to-moderate and occasionally epidemic. The annual reported number of malaria cases in 2017 was 1,368,585 with 1,446 deaths.
Malaria
Progress
Sudan has financed the required ACTs and RDTs required to sustain high coverage in 2019. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and has completed the insecticide resistance monitoring and management plan. The country has procured sufficient LLINs and carried out IRS to achieve operational vector control coverage of the targeted at risk population. Sudan has also scaled up the implementation of iCCM. The country has enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control and Elimination Scorecard.

Impact
The annual reported number of malaria cases in 2017 was 1,368,585 with 1,446 deaths.

Key Challenges
- Insecticide resistance threatens vector control.
- Gaps in funding for IRS.
- Increases in cases and deaths observed between 2010 and 2017.

The country has responded positively to the recommended actions on addressing the reasons for the increase in estimated malaria incidence and malaria mortality rate between 2010 and 2017.

RMNCAH and NTDs
Progress
Sudan has achieved high coverage of the tracer RMNCAH indicator skilled birth attendants, exclusive breastfeeding and DPT3. The country has enhanced tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in Sudan is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Sudan is high for onchocerciasis (92%), good for trachoma (60%), but low for schistosomiasis (34%), and for lymphatic filariasis (15%). The coverage is very low for soil transmitted helminths (0%). Overall, the
NTD preventive chemotherapy coverage index for Sudan in 2017 is 12, which represents a decrease compared with the 2016 index value (19). The country has enhanced tracking and accountability mechanisms with the development of the first NTD Scorecard.

Sudan has responded positively to the NTD recommended action addressing low coverage of NTD preventive chemotherapy, and continues to track progress as these actions are implemented. Sudan has responded positively to the RMNCAH recommended action addressing low coverage of postnatal care and coverage of ARTs and continues to track progress as this action is implemented.
