The entire population of Guinea-Bissau is at risk of malaria. The annual reported number of malaria cases in 2014 was 98,952 with 357 deaths.
Progress
Guinea-Bissau has made progress in scaling-up anti-malarial interventions and has banned the import and sale of oral artemisinin-based monotherapies. The country has achieved universal coverage of LLINs. Guinea-Bissau was awarded a 2015 ALMA Award for Excellence in Implementation of Vector Control.

The country has also achieved high coverage of the tracer MNCH interventions of DPT3 and vitamin A coverage and PMTCT.

Impact
The annual reported number of malaria cases in 2014 was 98,952 with 357 deaths. WHO, through modeling, projects that the country will achieve greater than 75% reduction in malaria incidence for the period between 2000 and 2015.

Recommended Actions
Guinea-Bissau has responded positively to the recommended action on the lack of data on Community Case Management of malaria, and continues to track progress as this action is implemented.
