The entire population of Togo is at high risk of malaria. The annual reported number of malaria cases in 2018 was 1,381,410 and 905 deaths.
Malaria
The Global Fund
The Global Fund has announced that Togo will receive €98.9 million for HIV, tuberculosis, malaria, and health systems strengthening as the country allocation for 2021-2023. The Global Fund has determined the total allocation amount based on Togo’s disease burden and income level, as well as several other factors. The malaria component is also allocated a specific proportion of the total, according to a formula developed by the Global Fund that takes into account several factors, including disease burden and previous disbursements. For Togo this is calculated at €54.6 million. The allocations to the individual disease components are not fixed, and can be adjusted according to decisions made at country level. Togo is urged to ensure that resources are allocated to malaria control from the overall Global Fund country allocation, as well as from domestic resources, to accelerate progress.

Progress
Togo has secured sufficient resources to fund the LLINs, RDTs and ACTs required in 2019. The country has distributed sufficient LLINs to achieve 100% operational coverage of the targeted at risk population. Togo has finalised the national insecticide resistance monitoring and management plan and has reported the results of insecticide resistance monitoring and management plan. Togo has significantly enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Scorecard.

Impact
The annual reported number of malaria cases in 2018 was 1,381,410 and 905 deaths.

**RMNCAH and NTDs**

**Progress**
Togo achieved high coverage of the tracer RMNCAH intervention exclusive breastfeeding and DPT3 vaccination, and has recently increased vitamin A coverage.

Progress in addressing Neglected Tropical Diseases (NTDs) in Togo is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, trachoma, schistosomiasis, and soil transmitted helminths. Preventive chemotherapy coverage in Togo is very good for lymphatic filariasis (100%), schistosomiasis (100%), trachoma (100%), onchocerciasis (84%) and soil transmitted helminths (84%). Overall, the NTD preventive chemotherapy coverage index for Togo in 2018 is 93, which represents a substantial increase compared with 2017 (84).
