Malaria is endemic in all parts of the United Republic of Tanzania, with seasonal peaks. The annual reported number of malaria cases in 2018 was 6,220,485 with 2,753 deaths.
Malaria

Global Fund Update
The Global Fund has announced that the United Republic of Tanzania will receive US$587.3 million for HIV, tuberculosis, malaria, and health systems strengthening as the country allocation for 2021-2023. The Global Fund has determined the total allocation amount based on the United Republic of Tanzania's disease burden and income level, as well as several other factors. The malaria component is also allocated a specific proportion of the total, according to a formula developed by the Global Fund that takes into account several factors, including disease burden and previous disbursements. For the United Republic of Tanzania this is calculated at US$179.4 million. The allocations to the individual disease components are not fixed, and can be adjusted according to decisions made at country level. The United Republic of Tanzania is urged to ensure that resources are allocated to malaria control from the overall Global Fund country allocation, as well as from domestic resources, to accelerate progress.

Progress
The United Republic of Tanzania secured sufficient resources to sustain universal coverage of LLINs, ACTs, and RDTs in 2019, and the country has procured sufficient LLINs to achieve 100% operational coverage. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and has completed the national insecticide resistance monitoring and management plan. The United Republic of Tanzania has a high rating in terms of public sector management systems (CPIA cluster D). The country has enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control and Elimination Scorecard. The country is also showing leadership in malaria control through its participation in the High Burden High Impact approach, and the launch of the Zero Malaria Starts with Me campaign.

Impact
The annual reported number of malaria cases in 2018 was 6,220,485 with 2,753 deaths.

Key Challenge
• Maintaining malaria high on the political and funding agenda on the island of Zanzibar as the burden continues to drop.

RMNCAH and NTDs

Progress

The United Republic of Tanzania has also made progress on tracer RMNCAH interventions including vitamin A, DPT3, and exclusive breastfeeding, and has recently increased coverage of ARTs in both the total population and children. The country has significantly enhanced the tracking and accountability mechanisms with the development and launch of the Tanzania Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard, and with the development of the multi-sectoral nutrition scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in the United Republic of Tanzania is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in United Republic of Tanzania is very good for schistosomiasis (100%), lymphatic filariasis (91%) and for onchocerciasis (81%). Preventive chemotherapy coverage is below WHO targets for soil transmitted helminths (60%) and for trachoma (40%). Overall, the NTD preventive chemotherapy coverage index for United Republic of Tanzania in 2018 is 71, which represents a substantial decrease compared with the 2017 index value (88).

Previous Recommended Action

The United Republic of Tanzania has responded positively to the RMNCAH recommended actions addressing low coverage of postnatal care and continues to track progress as these actions are implemented.
