The entire population of the Republic of the Congo is at high risk of malaria and transmission is intense all year round. The annual reported number of malaria cases in 2014 was 248,159 with 271 deaths.
Malaria

Progress
Congo has carried out insecticide resistance monitoring since 2014 and has reported the results to WHO.

Impact
The annual reported number of malaria cases in 2014 was 248,159 with 271 deaths. WHO, through modeling, projects that Congo has achieved a 50%–75% decrease in malaria incidence between 2000 and 2015.

Key Challenge
- The lack of new resources allocated to malaria in the Global Fund New Funding Model and through domestic resources jeopardises the country’s ability to sustain the gains made in the fight against malaria.

MNCH

Progress
Congo has made good progress in tracer MNCH interventions including skilled birth attendants and DPT3 and has recently significantly increased coverage of postnatal care as well as enhanced coverage of exclusive breastfeeding. The country has significantly enhanced the tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn and Child Health Scorecard.

Previous Recommended Action
Congo has responded positively to the MNCH recommended actions addressing lack of data for vitamin A and continues to track progress as these actions are implemented.
### New Key Recommended Action
