

### Scorecard for Accountability and Action

There is intense malaria transmission all year round in the Central African Republic and the entire population of the country is at high risk. The annual reported number of malaria cases in 2014 was 495,238 with 635 deaths.

#### Metrics

Commodities Financed and Financial Control	
LLIN financing 2016 projection (% of need)	100
Public sector RDT financing 2016 projection (% of need)	100
Public sector ACT financing 2016 projection (% of need)	100
World Bank rating on public sector management and institutions 2014 (CPIA Cluster D)	2.2
Insecticide Resistance Monitoring, Implementation and Impact	
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	2
Insecticide resistance monitored since 2014 and data reported to WHO	
National Insecticide Resistance Monitoring and Management Plan	
Scale of Implementation of iCCM (2013)	
Operational LLINIRS coverage (% of at risk population)	100
>75% Decrease in Malaria Incidence Projected 2000–2015	
Tracer Indicators for Maternal and Child Health	
Estimated % of Total Population living with HIV who have access to antiretroviral therapy (2015)	24
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2015)	25
% deliveries assisted by skilled birth attendant	54
Postnatal care (within 48 hrs)	
Exclusive breastfeeding (% children < 6 months)	34
Vitamin A Coverage 2013 (2 doses)	40
DPT3 coverage 2014 (vaccination among 0-11 month olds)	47

#### Key

	Target achieved or on track
	Progress but more effort required
	Not on track
	No data/Not applicable

## Malaria

### Progress

Central African Republic has secured the resources required for LLINs, ACTs and RDTs in 2016. Central African Republic has achieved operational universal coverage of vector control. The country has carried out insecticide resistance monitoring since 2014 and has reported the results to WHO.

### Impact

The annual reported number of malaria cases in 2014 was 495,238 with 635 deaths. WHO, through modeling, estimates that there has been a less than 50% decrease in malaria incidence between 2000 and 2015.

### Key Challenge

- Limited access to some at-risk populations is hampering coverage of malaria control interventions.

### Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Vector Control	Given the reported mosquito resistance to 2 classes of insecticide, urgently develop and implement a national insecticide resistance monitoring and management plan	Q1 2017		Deliverable not yet due but there are resources available in the recently approved malaria concept note to support the development of an insecticide resistance management plan

## MNCH

### Progress

The country has recently increased coverage of the tracer MNCH intervention DPT3.

### Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
MNCH <sup>1</sup> : Optimise quality of care	a) Prioritise the collection of postnatal care data	Q1 2013		CAR reports that postnatal care coverage through the health information system was reported at approximately 36% but the country is hoping to update this information in 2016 Deliverable not yet due
	b) Address the decreasing vitamin A coverage	Q4 2016		
	c) Work to accelerate coverage of ARTs especially in children under 14 years of age	Q1 2017		Deliverable not yet due but Central African Republic has increased ART coverage by 4% in the total population and by 10% in children

<sup>1</sup> MNCH metrics, recommended actions and response tracked through WHO MCA

Central African Republic has responded positively to the MNCH recommended action addressing low coverage of exclusive breastfeeding and continues to track progress as this action is implemented.
