Malaria transmission in South Sudan is generally perennial, with moderate to high intensity.
Malaria

Global Fund Update
The Global Fund has announced that South Sudan will receive US$ 86.7 million for HIV, tuberculosis, malaria, and health systems strengthening as the country allocation for 2018-2020. The Global Fund has determined the total allocation amount based on South Sudan’s disease burden and income level, as well as several other factors. The malaria component is also allocated a specific proportion of the total, according to a formula developed by the Global Fund that takes into account several factors, including disease burden and previous disbursements. For South Sudan this is calculated at US$ 48.7 million. The allocations to the individual disease components are not fixed, and can be adjusted according to decisions made at country level. South Sudan is urged to ensure that resources are allocated to malaria control from the overall Global Fund country allocation, as well as from domestic resources, to sustain the gains made in recent years.

Progress
South Sudan has implemented iCCM at scale. The country has secured sufficient resources to achieve universal coverage of LLINs in 2016.

Impact
WHO estimates that the country has achieved a change of less than 20% in the malaria incidence rate and a decrease of 20-40% in the malaria mortality rate for the period 2010 - 2015.

Key Challenge
- The lack of resources in the GF malaria allocation compared to previous allocations.

<td>MNCH¹: Optimise quality of care</td>
<td>Work to accelerate coverage of ARTs in the total population and in children under 14 years of age</td>
<td>Q1 2017</td>
<td>Green</td>
<td>South Sudan has increased ART coverage by 5% in the total population and 1% in children. The country has updated the ARV guidelines and is working to optimize the quality of services at existing ART sites to allow for scale-up to maximum capacity, and then to expand to other sites. South Sudan is also working to enhance task sharing among health workers and task shifting and is diversifying implementation structures, for example by using the humanitarian implementation mechanisms and development partner structures. In the last quarter a national level meeting took place between the Global Fund, MOH and partners and efforts will be made to facilitate the flow of funds to improve access to ART. Vitamin A supplementation has been integrated with other nutrition activities and a new guideline has been developed to link the vitamin A supplementation activities with NIDs. The recently completed NID in November has included vitamin A supplementation. The Canadian Government has provided a multi-year grant to support the integration of vitamin A with immunization activities and this is expected to help to improve coverage moving forward.</td>
