Togo ALMA Quarterly Report
Quarter Four, 2016

Scorecard for Accountability and Action

The entire population of Togo is at high risk of malaria. The annual reported number of malaria cases in 2015 was 1,113,928 and 1,205 deaths.
Malaria

The Global Fund

The Global Fund has announced that Togo will receive € 57.6 million for HIV, tuberculosis, malaria, and health systems strengthening as the country allocation for 2018-2020. The Global Fund has determined the total allocation amount based on Togo’s disease burden and income level, as well as several other factors. The malaria component is also allocated a specific proportion of the total, according to a formula developed by the Global Fund that takes into account several factors, including disease burden and previous disbursements. For Togo this is calculated at € 28.5 million. The allocations to the individual disease components are not fixed, and can be adjusted according to decisions made at country level. Togo is urged to ensure that resources are allocated to malaria control from the overall Global Fund country allocation, as well as from domestic resources, to sustain the gains made in recent years.

Progress

Togo has secured sufficient resources to achieve universal coverage of LLINs, RDTs and ACTs in 2016. The country has distributed sufficient LLINs to achieve 100% operational coverage. Togo has scaled up the implementation of iCCM.

Impact

The annual reported number of malaria cases in 2015 was 1,113,928 and 1,205 deaths. WHO estimates that the country has achieved a decrease of 20-40% for malaria incidence rate and a decrease of greater than 40% for malaria mortality rate for the period 2010 - 2015.
