

### Scorecard for Accountability and Action

Malaria transmission is more intense in the south of Mali. The annual reported number of malaria cases in 2019 was 6,453,445 with 1,454 deaths.

## **Malaria**

### **Sustaining Essential Health Services During the COVID-19 Pandemic**

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential life-saving interventions during this difficult time including for Reproductive, Maternal, Newborn, Child and Adolescent health, neglected Tropical Diseases and malaria.

For Mali, we commend the Ministry of Health, in the decision to go ahead with the universal coverage campaign for LLINs, and rolling out SMC, in accordance with the recent guidance and recommendations from WHO and the RBM Partnership to End Malaria. Based on WHO modeling, this decision, allied with sustained malaria case management through the health system and the delivery of seasonal malaria chemoprevention, will prevent a significant increase in malaria cases and deaths. Under the worst-case scenario, in which all ITN campaigns are suspended and there is a 75% reduction in access to effective antimalarial medicines, WHO estimate that there could be a 14.9% increase in malaria cases, and a 40.1% increase in malaria deaths in Mali. This scenario would represent a complete reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2021 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19..

### **Global Fund Update**

The Global Fund has announced that Mali will receive €162.1 million for HIV, tuberculosis, malaria, and health systems strengthening as the country allocation for 2021-2023. The Global Fund has determined the total allocation amount based on Mali's disease burden and income level, as well as several other factors. The malaria component is also allocated a specific proportion of the total, according to a formula developed by the Global Fund that takes into account several factors, including disease burden and previous disbursements. For Mali this is calculated at €81.7 million. The allocations to the individual disease components are not fixed, and can be adjusted according to decisions made at country level. Mali is urged to ensure that resources are allocated to malaria control from the overall Global Fund country allocation, as well as from domestic resources, to accelerate the gains made in recent years.

### **Progress**

Mali has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. The majority of the malaria commodities required to achieve and sustain universal coverage in 2020 are financed. Mali has procured sufficient LLINs to achieve universal operational coverage of the targeted at risk population. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. Mali has significantly enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Control Scorecard. The country is also showing leadership in malaria control through its participation in the High Burden High Impact Approach.

## Impact

The annual reported number of malaria cases in 2019 was 6,453,445 with 1,454 deaths.

## Key Challenge

- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

## Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Address funding	Ensure the GF malaria funding application is submitted by Q2 2021 and ensure that resources are allocated to malaria control at a level that is sufficient to sustain the gains made in recent years	Q2 2021		Deliverable not yet due
Impact	Ensure that malaria services including case management and vector control are sustained and implemented whilst using COVID-19 sensitive	Q4 2020		Mali have updated the LLIN, IRS and SMC guidelines taking into account the COVID-19 pandemic. The LLIN campaign has been completed as have the four rounds of the SMC campaign is ongoing. All campaigns were adapted to take account of COVID-19 including with switching to door to door distributions and ensuring PPE were available. Malaria RDTs have been supplied to the COVID-19 support centres

## RMNCAH and NTDs

### Progress

Mali has achieved high coverage of the tracer RMNCAH intervention of vitamin A and has recently increased coverage of exclusive breastfeeding and skilled birth attendants. The country has significantly enhanced the tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in Mali is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Mali is high for trachoma (100%), for schistosomiasis (95%), for onchocerciasis (79%) but 0% for Lymphatic Filariasis as MDA was not conducted in 2019. Overall, the NTD preventive chemotherapy coverage index for Mali in 2019 is 17, which represents very substantial decrease compared with the 2018 index value (83). The insecurity in the North of Mali prevented the Transmission Assessment Survey 1 (TAS1) and MDA being conducted for Lymphatic filariasis which resulted in the low 2019 NTD coverage index.

## Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
-----------	-------------	--------------------------------	----------	---

RMNCAH <sup>1</sup> : Impact	Ensure that essential RMNCAH services are sustained and implemented whilst using Covid-19 sensitive guidelines during the pandemic. Address any stock-outs of essential RMNCAH commodities	Q4 2020		Mali has established a COVID-19 crisis committee and has trained health care workers on the management of cases and on surveillance. Testing kits have been supplied to laboratories and health facilities have been provided with hand washing facilities and PPE. Services continue to be maintained
---------------------------------	--	---------	--	--

The country has responded positively to the RMNCAH recommended action addressing the low coverage of ARTs, with small increases in coverage reported.

### New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
NTDs	Ensure that NTD interventions including MDAs, vector control and Morbidity Management and Disability Prevention are sustained and implemented whilst using Covid-19 sensitive guidelines during the pandemic. This includes prioritising key necessary catch up activities	Q4 2021

### Key

	Action achieved
	Some progress
	No progress
	Deliverable not yet due
