Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden of COVID-19. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential life-saving interventions during this difficult time including for Reproductive, Maternal, Newborn, Child and Adolescent health, Neglected tropical Diseases and malaria.

For Senegal, it will be of vital importance that the country sustains essential health services including malaria case management. Without the 2020 SMC campaign, coupled with sustained malaria case management, there would be an increase in malaria cases and deaths. The country is commended for rolling out SMC in 2020. Under the worst-case scenario, in which there is a 75% reduction in access to effective antimalarial medicines, WHO estimate that there could be a 19.5% increase in malaria cases, and a 79.9% increase in malaria deaths in Senegal. This scenario would represent a complete reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades.

Progress in addressing Neglected Tropical Diseases (NTDs) in Nigeria is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Nigeria is high for schistosomiasis (99%) and for onchocerciasis (80%), good for soil transmitted helminths (76%), for trachoma (67%) and for lymphatic filariasis (62%). Overall, the NTD preventive chemotherapy coverage index for Nigeria in 2019 is 76, which represents a substantial increase compared with the 2018 index value (60).

Progress

Senegal has implemented iCCM country wide. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. The country has recently finalised the insecticide resistance management and monitoring plan. Senegal has secured sufficient resources to sustain universal coverage of essential malaria control interventions in 2020 and has distributed sufficient LLINs to achieve universal operational coverage in the targeted at risk population. Senegal has significantly enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control and Elimination Scorecard. Senegal has put in place strong public sector management systems and has achieved a rating of 3.5 for Cluster D CPIA. Senegal was the first country to launch the Zero Malaria Starts with Me campaign. The country is applauded for loaning RDTs to The Gambia to address the country’s stockout during the COVID-19 pandemic.

Impact

The annual reported number of malaria cases in 2019 was 359,246 and 260 deaths.

Key Challenge

- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

## RMNCAH and NTDs

### Progress

Senegal has achieved high coverage of the tracer RMNCAH interventions DPT3 and postnatal care, and has recently increased coverage of ARTs in children and the total population, as well as skilled birth attendants. The country has enhanced the tracking and accountability mechanisms with the development of the Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in Senegal is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Senegal is high for trachoma (100%), good for schistosomiasis (76%), for soil-transmitted helminths (70%), for lymphatic filariasis (68%) and low for onchocerciasis (26%). Overall, the NTD preventive chemotherapy coverage index for Senegal in 2019 is 62, which represents a big increase compared with the 2018 index value (17).
