Malaria is endemic in all parts of Zambia and transmission is seasonal. The annual reported number of malaria cases in 2019 was 6,417,487 with 1,339 deaths.
Malaria

Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential life-saving interventions during this difficult time including for Reproductive, Maternal, Newborn, Child and Adolescent health, Neglected Tropical Diseases and malaria.

For Zambia, it was of vital importance to ensure that the universal coverage campaign for long-lasting insecticidal nets (LLINs) went ahead, whilst taking into account physical distancing, in accordance with the guidance and recommendations from WHO and the RBM Partnership to End Malaria. Without the LLIN campaign, planned indoor residual spraying (IRS) and sustained malaria case management, there could be an increase in malaria cases and deaths. The country is commended for prioritizing malaria with the IRS and LLIN campaigns going ahead. Under the worst-case scenario, in which all ITN campaigns are suspended and there is a 75% reduction in access to effective antimalarial medicines, WHO estimate that there could have been a 42% increase in malaria cases, and a 124% increase in malaria deaths in Zambia. This scenario would represent a complete reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2021 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19.

Progress

Zambia has secured most of the required financing to fund the ACTs, LLINs and IRS required for 2021, including with significant domestic resource commitments. The country has also distributed sufficient LLINs and carried out sufficient IRS to achieve universal operational coverage of the targeted at risk population. Zambia carried out insecticide resistance monitoring since 2015 and reported the results to WHO and has completed the national insecticide resistance monitoring and management plan. Zambia has scaled up the implementation of iCCM and achieved 100% operational coverage of LLINs. Zambia has launched the Malaria Ends with Me campaign.

In line with the legacy agenda of the ALMA chair, His Excellency President Uhuru Kenyatta, Zambia has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Control and Elimination Scorecard and the sharing of the country scorecards through the ALMA Scorecard Hub. The country has also launched the multisectoral high level End Malaria Council and Malaria Fund.

Impact

The annual reported number of malaria cases in 2019 was 6,417,487 with 1,339 deaths.

Key Challenges

- The country has documented mosquito resistance to four insecticide classes.
- There is a need to strengthen cross border collaboration with neighbouring countries.
- The country has significant resource gaps.
- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

### RMNCAH and NTDs

**Progress**

Zambia has achieved high coverage in the tracer RMNCAH interventions of exclusive breastfeeding, vitamin A and DPT3. The country has also increased coverage of ARTs in children. Zambia has enhanced accountability mechanisms with the development of a Reproductive, Maternal, Newborn and Child Health Scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in Zambia is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Zambia is below WHO targets for trachoma (35%) and for soil transmitted helminths (17%); very low for lymphatic filariasis (0%) and for schistosomiasis (0%). Overall, the NTD preventive chemotherapy coverage index for Zambia in 2019 is 2, which represents a very substantial decrease compared with the 2018 index value (36).

<tbody>
<tr>
<td>NTDs</td>
<td>Work to increase the preventive chemotherapy for soil transmitted helminths, trachoma and for schistosomiasis along with lymphatic filariasis to reach WHO targets</td>
<td>Q4 2020</td>
<td>Green</td>
<td>Since the end of 2020, the country has organised MDA targeting Soil Transmitted Helminths, Schistosomiasis and Lymphatic Filariasis and the geographical coverage was improved at about 90%. This has likely utilised the expiring drugs but the reports are currently in preparation.</td>
</tr>
<tr>
<td>RMNCAH 1: Impact</td>
<td>Ensure that essential RMNCAH services are sustained and implemented whilst using Covid-19 sensitive guidelines during the pandemic. Address any stock-outs of essential RMNCAH commodities</td>
<td>Q4 2020</td>
<td>Green</td>
<td>RMNCAH Services have continued to be implemented while following Covid 19 guidelines. Round one of the Child Health Week took place in June while round 2 is planned to be held in November. There was full involvement of provincial and district leadership with high coverage of all services and general availability of Covid 19 prevention logistics and messaging and adherence across all the provinces. Adolescent Unit of MOH partnered with social media platforms and other line ministries. National level provided guidance to facilities to comply with the Covid 19 restrictions e.g. adolescent advised to limit numbers at a particular time to maintain physical distance.</td>
</tr>
<tr>
<td>NTDs</td>
<td>Prioritise the funding to implement preventive chemotherapy for lymphatic filariasis and schistosomiasis and work to increase preventive chemotherapy for soil transmitted helminths, trachoma and reach WHO targets</td>
<td>Q4 2021</td>
<td>Green</td>
<td>Since the end of 2020, the country has organised MDA targeting Soil Transmitted Helminths, Schistosomiasis and Lymphatic Filariasis and the geographical coverage was improved at about 90%. Schistosomiasis MDA in the remaining 49 implementation units was extended to 2021. Mobilizing funds for MDA has been a priority and all MDAs were supported by WHO. The country also conducted the 5th round of Lymphatic Filariasis MDA in 79 implementation units with ASCEND support and reports are under compilation. Also, Trachoma MDA has been just completed with the support of ASCEND and reports are also under compilation. The NTD programme are identifying 'hot spots' in the districts and implementing targeted interventions; strengthening WASH NTD, Integrated Vector Management and Vet Public Health.</td>
