The entire population of the Democratic Republic of Congo is at high risk of malaria and transmission is intense year round with seasonal variations. The annual reported number of malaria cases in 2020 was 24,959,997 with 18,636 deaths.
Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential life-saving interventions during this difficult time including for Reproductive, Maternal, Newborn, Adolescent and Child health, Neglected Tropical Diseases and malaria.

For the Democratic Republic of Congo, it was of vital importance to ensure that the rolling long-lasting insecticidal net (LLIN) campaigns scheduled for 2020 and 2021 were completed. The country is congratulated for rolling out the majority of the 2021 campaigns. Under the worst-case scenario, in which the LLIN campaigns are not completed and there is a 75% reduction in access to effective antimalarial medicines, WHO estimate that there could be a 14.2% increase in malaria cases, and a 98.2% increase in malaria deaths in The Democratic Republic of Congo. This scenario would represent a complete reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades.

WHO estimates that there were an additional 47,000 malaria deaths globally in 2020 due to service disruptions during the COVID-19 pandemic, leading to an estimated 7.5% increase in deaths.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2022 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19.

The country has been affected by the continent-wide restriction of access to COVID-19 vaccines and had only been able to cover 0.2% of their population by the end of 2021.

Malaria

Progress

The Democratic Republic of Congo procured sufficient ACTs, RDTs and LLINs to achieve 100% operational coverage of the targeted at risk population in 2021. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. The Democratic Republic of Congo has secured the resources required to sustain coverage of LLINs, ACTs and RDTs in 2021. The country is also showing leadership in malaria control through its participation in the High Burden High Impact approach. The country has also successfully launched the Zero Malaria Starts with Me campaign.

In line with the legacy agenda of the ALMA chair, His Excellency President Uhuru Kenyatta, the country has enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control Scorecard. This scorecard is up to date but has not yet been posted on the ALMA Scorecard Hub. The Democratic Republic of Congo plans to announce the creation of the End Malaria Council and Fund.
Impact
The annual reported number of malaria cases in 2020 was 24,959,997 with 18,636 deaths.

Key Challenges
- Resource gaps to fully implement the national strategic plan.
- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

<tbody>
<tr>
<td>Impact</td>
<td>Ensure that malaria services including case management and vector control are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic</td>
<td>Q4 2022</td>
<td>All protective measures against COVID-19 were respected whilst implementing malaria control interventions. However, stocks of ACTs and RDTs are low. The ITN campaigns were implemented and digitalised but some of the campaigns have spilled over into 2022, as a result of COVID-19 related delivery delays. The country is working to launch an End Malaria Council and Fund. The country observed an increase in severe malaria cases and supervision at decentralized level were not done as planned, again, with this intervention impacted by the pandemic</td>

RMNCAH and NDTs
Progress
The Democratic Republic of Congo has achieved high coverage in the tracer RMNCAH intervention of skilled birth attendants. The country has enhanced the tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn and Child Health Scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in Democratic Republic of the Congo is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. In 2020, Preventive chemotherapy coverage in Democratic Republic of the Congo was very low for trachoma (14%), lymphatic filariasis (9%), Soil transmitted helminths (4%), onchocerciasis (0%) and schistosomiasis (0%). Overall, the NTD preventive chemotherapy coverage index for Democratic Republic of the Congo in 2020 is 1, which represents a very substantial decrease compared with the 2019 index value (74).

<tbody>
<tr>
<td>RMNCAH¹: Impact</td>
<td>Ensure that essential RMNCAH services are sustained and implemented whilst using Covid-19 sensitive guidelines during the pandemic. Address any stock-outs of essential RMNCAH commodities</td>
<td>Q4 2022</td>
<td>Good progress</td>
<td>A survey was conducted to understand the supply and demand for RMNCAH services, targeting Kinshasa which was most impacted by the COVID-19 pandemic. A trend of increasing use of delivery service during the COVID-19 pandemic has been observed and the use of childbirth services by teens and young people increased by 29%. ANC-1 decreased including in adolescents and young people, however an increase in coverage of ANC4 was observed. The Ministry of Health produced RMNCAH and nutrition guidelines in the context of COVID-19. The country organised briefings by video conference for health staff, and the materials have been disseminated.</td>
</tr>
<tr>
<td>NTDs</td>
<td>Ensure that NTD interventions including Mass Drug Administration, vector control and Morbidity Management and Disability Prevention are sustained and implemented whilst using Covid-19 sensitive guidelines during the pandemic. This includes prioritising key necessary catch up activities</td>
<td>Q4 2022</td>
<td>Good progress</td>
<td>The country reports that the NTD key interventions continue in 2021 whilst using COVID-19 sensitive guidelines.</td>
</tr>
</tbody>
</table>

The country has responded positively to the RMNCAH recommended actions addressing accelerating coverage of ARTs in children and vitamin A and continues to track progress as theses action are implemented.
