Malaria transmission occurs year-round in Cameroon and is most intense in the south of the country. The annual reported number of malaria cases in 2020 was 2,974,819 with 4,121 deaths.
Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential life-saving interventions during this difficult time including for Reproductive, Maternal, Newborn, Child and Adolescent health, Neglected Tropical Diseases and malaria.

In 2021, for Cameroon, it was of vital importance that the delivery of seasonal malaria chemoprevention as well as the completion of the long-lasting insecticidal net (LLIN) universal coverage campaign in the remaining three regions went ahead as planned, whilst taking into account physical distancing, in accordance with the guidance and recommendations from WHO and the RBM Partnership to End Malaria. The country is congratulated for successfully implementing the SMC in 2021. Without this SMC campaign, coupled with the need to sustain essential health services including malaria case management, there would have been an increase in malaria cases and deaths. Under the worst-case scenario, in which all ITN campaigns are suspended and with a 75% reduction in access to effective antimalarial medicines, WHO estimate that there could have been a 13.4% increase in malaria cases, and a 74.6% increase in malaria deaths in Cameroon. This scenario would represent a complete reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades. WHO estimates that there were an additional 47,000 malaria deaths globally in 2020 due to service disruptions during the COVID-19 pandemic, leading to an estimated 7.5% increase in deaths.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2022 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19.

Given the difficulties in securing essential health commodities in Africa during the COVID-19 pandemic, it is of vital importance that countries sign, ratify and deposit the African Medicines Agency (AMA) instrument with the AUC in order to improve access to quality, safe and efficacious medical products in Africa. The country is congratulated for doing this.

The country has been affected by the continent-wide restriction of access to COVID-19 vaccines and had only been able to cover 4% of their population by April 2022. The country, working with partners, should invest in education and behaviour change communication to increase the uptake of COVID vaccines and therapeutics.

**Malaria Progress**

Cameroon secured the resources to cover the costs of the LLINs, ACTs and RDTs needed in 2022 and has more than 6 months of ACT and RDT commodity stocks. Cameroon has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and has completed the insecticide resistance monitoring and management plan. and has carried out drug resistance testing since 2018 and has reported the results to WHO. The national strategic plan includes activities targeting
refugees and IDPs. The country is also showing leadership in malaria control through its participation in the High Burden High Impact approach.

In line with the legacy agenda of the ALMA chair, His Excellency President Uhuru Kenyatta, Cameroon has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Control Scorecard. The country is also planning the launch of the End Malaria Council and Fund.

**Impact**
The annual reported number of malaria cases in 2020 was 2,974,819 with 4,121 deaths.

**Key Challenges**
- Insecticide resistance.
- Delays in the completion of the universal coverage campaign.
- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

<tr>
<td>Impact</td>
<td>Ensure that malaria services including case management and vector control are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic</td>
<td>Q4 2022</td>
<td></td>
<td>Malaria control interventions are continuing as planned whilst taking into account COVID-19 guidelines. The SMC campaign planned in 2022 will target 1,968,661 children in 4 cycles, with planning on track. The country has adequate stocks of ACTs and RDTs for 2022. There are some delays in the planning of the LLIN campaign. The country successfully launched the Stop Palu campaign in Q1 2022</td>

**RMNCAH and NTDs**

**Progress**
Progress in addressing Neglected Tropical Diseases (NTDs) in Cameroon is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Cameroon is very low for trachoma (0%) and for lymphatic filariasis (0%). It is low for onchocerchiasis (36%) and for soil transmitted helminths (36%) and high for schistosomiasis (99%). Overall, the NTD preventive chemotherapy coverage index for Cameroon in 2020 is 4 and this represents substantial decrease compared with the 2019 index value (16)
