The entire population of Equatorial Guinea is at high risk of malaria and the transmission is intense all year round. The annual reported number of malaria cases in 2019 was 83,396 and 15 deaths.
Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential life-saving interventions during this difficult time including for Reproductive, Maternal, Newborn, Adolescent and Child health, Neglected Tropical Diseases and malaria.

For Equatorial Guinea, the country is encouraged to sustain the delivery of essential health services including malaria case management, during the COVID-19 pandemic. Without this, it is estimated by WHO that there will be an increase in malaria cases and deaths. Under the worst-case scenario, in which there is a 75% reduction in access to effective antimalarial medicines, WHO estimate that there could be a 3.8% increase in malaria cases, and a 30.8% increase in malaria deaths in Equatorial Guinea. This scenario would represent a complete reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades. WHO estimates that there were an additional 47,000 malaria deaths globally in 2020 due to service disruptions during the COVID-19 pandemic, leading to an estimated 7.5% increase in deaths.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2022 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19.

Given the difficulties in securing essential health commodities in Africa during the COVID-19 pandemic, it is of vital importance that countries sign, ratify and deposit the African Medicines Agency (AMA) instrument with the AUC in order to improve access to quality, safe and efficacious medical products in Africa. The country is encouraged to complete this process.

The country has been affected by the continent-wide restriction of access to COVID-19 vaccines and had only been able to cover 18% of their population by April 2022. The country, working with partners, should invest in education and behaviour change communication to increase the uptake of COVID vaccines and therapeutics.

Malaria

Progress

Equatorial Guinea has made progress with malaria control on Bioko Island and is working to extend this success to the mainland. The country has completed the national insecticide resistance monitoring and management plan and has reported the results of insecticide resistance monitoring to WHO and has carried out drug resistance testing since 2018 and has reported the results to WHO. The country has procured adequate stocks of RDTs and ACT procurement is underway.

Impact

The annual reported number of malaria cases in 2019 was 83,396 and 15 deaths.

Key Challenge

- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

Equatorial Guinea has responded positively to the previous recommended actions addressing low coverage of iCCM and continues to track progress as this action is implemented.

### RMNCAH and NTDs

**Progress**

Progress in addressing Neglected Tropical Diseases (NTDs) in Equatorial Guinea is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis and soil transmitted helminths. Preventive chemotherapy coverage in Equatorial Guinea was zero for all the preventive chemotherapy targeted diseases in 2020. Overall, the NTD preventive chemotherapy coverage index for Equatorial Guinea in 2020 is zero, which represents no change compared with the 2019 index value (0).
