Malaria transmission is confined to the north-east part of Namibia where malaria is endemic and about 72% of the population of the country is at risk. The annual reported number of malaria cases in 2020 was 13,636 with 16 deaths.
Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden of COVID-19. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential life-saving interventions during this difficult time including for Reproductive, Maternal, Newborn, Child and Adolescent health and malaria.

WHO estimates that there were an additional 47,000 malaria deaths globally in 2020 due to service disruptions during the COVID-19 pandemic, leading to an estimated 7.5% increase in deaths.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2022 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19.

Given the difficulties in securing essential health commodities in Africa during the COVID-19 pandemic, it is of vital importance that countries sign, ratify and deposit the African Medicines Agency (AMA) instrument with the AUC in order to improve access to quality, safe and efficacious medical products in Africa. The country is congratulated for doing this.

The country has been affected by the continent-wide restriction of access to COVID-19 vaccines and had only been able to cover 16% of their population by April 2022. The country, working with partners, should invest in education and behaviour change communication to increase the uptake of COVID vaccines and therapeutics.

Malaria Progress

Namibia secured sufficient funding for the required number of ACTs and RDTs for 2022. The country has reported the insecticide resistance data to WHO. Namibia has recently launched the Zero Malaria Starts with Me campaign.

In line with the legacy agenda of the ALMA chair, His Excellency President Uhuru Kenyatta, Namibia has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Elimination Scorecard, however this is not yet shared to the ALMA Scorecard Hub. The country has established End Malaria Councils at sub-national level.

Impact

The annual reported number of malaria cases in 2020 was 13,636 with 16 deaths.

Key Challenges

- Maintaining malaria high on the political and funding agenda.
- There is a need to strengthen cross border collaboration with neighbouring countries.
- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

<tbody>
<tr>
<td>Impact</td>
<td>Ensure that malaria services including case management and vector control are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic</td>
<td>Q4 2022</td>
<td></td>
<td>There are currently no stockouts reported for ACTs and RDTs in the country. However, there are resource gaps to avail insecticides on time for the 2022 spray season and operational costs to implement IRS in 2022 continue to be a major challenge resulting in very low coverage</td>
</tr>
<tr>
<td>Vector Control</td>
<td>Ensure the IRS commodities are procured in time for the 2021 IRS campaigns</td>
<td>Q3 2021</td>
<td></td>
<td>Insecticide procured by the Global Fund was received timely for the Q4 IRS campaign. The consignment procured by the government required to be airlifted to arrive in the country before 30th November 2021 but this was not possible due to lack of finances and is only expected in the country on 30th March 2022. For this reason, IRS was stopped, resulting in a very low reported national coverage of 36%. On the other hand, distribution of 175,00 LLINs was carried out in an attempt to protect the population not under IRS.</td>
</tr>
<tr>
<td>Impact</td>
<td>Investigate and address the reasons for the increase in estimated malaria incidence and mortality between 2015 and 2020, which means that the country did not achieve the 2020 target of a 40% reduction in malaria incidence</td>
<td>Q4 2022</td>
<td></td>
<td>A significant reason for the observed increase in malaria morbidity and mortality in 2020 was the less than 50% coverage of Indoor Residual Spraying. The country is working to find a solution to the lack of resources to complete the planned IRS</td>
</tr>

### RMNCAH and NTDs

**Progress**

Namibia has enhanced tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in Namibia is shown using a composite index calculated from preventive chemotherapy coverage achieved for schistosomiasis and soil transmitted helminths. In 2020, preventive chemotherapy
coverage in Namibia was 0% for the two diseases. Overall, the NTD preventive chemotherapy coverage index for Namibia in 2020 is 0, with no change compared with the 2019 index value of 0.
