Malaria transmission is most intense in the south whilst the desert areas in the north are malaria-free. The annual reported number of malaria cases in 2020 was 4,377,938 with 5,849 deaths.
Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential life-saving interventions during this difficult time including for Reproductive, Maternal, Newborn, Child and Adolescent health, Neglected Tropical Diseases and malaria.

For Niger, we commend the Ministry of Health, in the decision to go ahead with the rolling out of Seasonal Malaria Chemoprevention, in accordance with the guidance and recommendations from WHO and the RBM Partnership to End Malaria. WHO modelling suggests that this decision, allied with sustained malaria case management through the health system, and seasonal malaria chemoprevention campaigns will prevent a significant increase in cases and deaths. The country is commended for this commitment to the fight against malaria. Under the worst-case scenario, in which all ITN campaigns are suspended and there is a 75% reduction in access to effective antimalarial medicines, WHO estimate that there could be a 17.6% increase in malaria cases, and a 100.7% increase in malaria deaths in Niger. This scenario would represent a complete reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades.

WHO estimates that there were an additional 47,000 malaria deaths globally in 2020 due to service disruptions during the COVID-19 pandemic, leading to an estimated 7.5% increase in deaths.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2022 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19.

Given the difficulties in securing essential health commodities in Africa during the COVID-19 pandemic, it is of vital importance that countries sign, ratify and deposit the African Medicines Agency (AMA) instrument with the AUC in order to improve access to quality, safe and efficacious medical products in Africa. The country is congratulated for doing this.

The country has been affected by the continent-wide restriction of access to COVID-19 vaccines and had only been able to cover 6% of their population by April 2022. The country, working with partners, should invest in education and behaviour change communication to increase the uptake of COVID vaccines and therapeutics.

**Malaria Progress**

Niger mobilised the required financing to procure and distribute LLINs, and RDTs required for 2022. The country has procured sufficient LLINs to achieve universal operational coverage of the targeted population. The country has adequate stocks of ACTs and RDTs. Niger has completed the national insecticide resistance monitoring and management plan and has recently reported the results of insecticide resistance testing to WHO. The country is also showing leadership in malaria control through its participation in the High Burden High Impact approach. Niger has launched its Zero Malaria Starts with Me campaign.

In line with the legacy agenda of the ALMA chair, His Excellency President Uhuru Kenyatta, the country has enhanced the tracking and accountability mechanisms for malaria with the
development of the Malaria Control Scorecard, although the scorecard is not yet posted to the ALMA Scorecard Hub. The country is developing a concept note for the End Malaria Council.

**Impact**
The annual reported number of malaria cases in 2020 was 4,377,938 with 5,849 deaths.

**Key Challenges**
- Insufficient resources to achieve high coverage of essential malaria interventions.
- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

</table>

**RMNCAH and NTDs**

**Progress**
The country has enhanced tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in Niger is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, schistosomiasis, soil transmitted helminths and trachoma. In 2020, preventive chemotherapy coverage was 78% for lymphatic filariasis, 59% for schistosomiasis, 100% for soil transmitted helminths and 30% for trachoma. Overall, the NTD preventive chemotherapy coverage index for Niger in 2020 is 61, which represents a decrease compared with the 2019 index value of 74.
