Malaria transmission occurs all year round in most parts of Uganda. The annual reported number of malaria cases in 2020 was 15,342,561 with 4,252 deaths.
Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic has disrupted routine health services considerably, and the economic impacts continue to hamper health systems recovery. It is vitally important that we focus on recovering lost ground in delivering essential life-saving interventions during this difficult time, sustaining progress towards the SDG targets for Malaria, Neglected Tropical Diseases and Reproductive, Maternal, New-born, Child and Adolescent health.

Given the difficulties in securing essential health commodities in Africa during the COVID-19 pandemic, it is of vital importance that countries sign, ratify and deposit the African Medicines Agency (AMA) instrument with the AUC in order to improve access to quality, safe and efficacious medical products in Africa. The country is congratulated for doing this. Early procurement of essential health commodities is also highly recommended whilst long delivery times persist.

The country has been affected by the continent-wide restriction of access to COVID-19 vaccines and had only been able to cover 24% of their population by July 2022. The country, working with partners, should invest in education and behaviour change communication to increase the uptake of COVID vaccines and therapeutics.

Malaria Progress

Uganda has procured sufficient LLINs to achieve operational universal coverage of vector control in the targeted at risk population. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. Uganda has also completed drug resistance monitoring since 2018 and has reported the data to WHO. Uganda has completed the insecticide resistance monitoring and management plan. Uganda has decreased the estimated malaria incidence and malaria mortality rate by more than 40% since 2010. The country is also showing leadership in malaria control through its participation in the High Burden High Impact approach.

In line with the legacy agenda of the ALMA chair, His Excellency President Uhuru Kenyatta, Uganda has enhanced the tracking and accountability mechanisms with the development of the Malaria Control Scorecard, although the scorecard is not yet posted to the ALMA Scorecard Hub. Uganda has launched the Mass Action Against Malaria campaign and the End Malaria Fund.

Impact

The annual reported number of malaria cases in 2020 was 15,342,561 with 4,252 deaths.

Key Challenge

- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

</table>

### RMNCAH and NTDs

**Progress**

Uganda has significantly enhanced the tracking and accountability mechanisms with the ongoing development of a Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in Uganda is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. In 2020, preventive chemotherapy coverage was 100% for lymphatic filariasis, 85% for onchocerciasis, 62% for soil transmitted helminths, 57% for trachoma and 47% for schistosomiasis. Overall, the NTD preventive chemotherapy coverage index for Uganda in 2020 was 68, which represents a high increase when compared to 2019 index value (18).
