The entire population of Togo is at high risk of malaria. The annual reported number of malaria cases in 2019 was 2,406,091 and 1,275 deaths.
Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic has disrupted routine health services considerably, and the economic impacts continue to hamper health systems recovery. It is vitally important that we focus on recovering lost ground in delivering essential life-saving interventions during this difficult time, sustaining progress towards the SDG targets for Malaria, Neglected Tropical Diseases and Reproductive, Maternal, New-born, Child and Adolescent health.

Given the difficulties in securing essential health commodities in Africa during the COVID-19 pandemic, it is of vital importance that countries sign, ratify and deposit the African Medicines Agency (AMA) instrument with the AUC in order to improve access to quality, safe and efficacious medical products in Africa. The country is encouraged to complete this process. Early procurement of essential health commodities is also highly recommended whilst long delivery times persist.

The country has been affected by the continent-wide restriction of access to COVID-19 vaccines and had only been able to cover 18% of their population by October 2022. The country, working with partners, should invest in education and behaviour change communication to increase the uptake of COVID vaccines and therapeutics.

**Malaria**

**Progress**

Togo has secured sufficient resources to fund the LLINs, RDTs and ACTs required in 2022. The country has distributed sufficient LLINs to achieve 100% operational coverage of the targeted at-risk population. Togo has finalised the national insecticide resistance monitoring and management plan and has reported the results of insecticide resistance monitoring and management plan.

In line with the priority agenda of the ALMA chair, His Excellency President Umaro Sissoco Embaló, Togo has significantly enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Scorecard, although the scorecard is not yet shared on the ALMA Scorecard Hub.

**Impact**

The annual reported number of malaria cases in 2019 was 2,406,091 and 1,275 deaths.

**Key Challenge**

- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

<td>Ensure that malaria services including case management and vector control are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic</td>
<td>Q4 2022</td>
<td>✔️</td>
<td>The country in collaboration with WHO continued the process of the epidemiological stratification in preparation of the development of the new MSP. The fourth round of the SMC campaign was done with the support of partners including the Global Fund, UNICEF and the Malaria Consortium. Key malaria activities were implemented, and the country did not face stock out of ACT and RDT during the Q3. Preparation of the ZMSWM campaign is ongoing.</td>

Togo has responded positively to the recommended action on monitoring national insecticide resistance and continues to track progress as this action is implemented.

### RMNCAH and NTDs

#### Progress

Togo achieved high coverage of the tracer RMNCAH intervention vitamin A.

Progress in addressing Neglected Tropical Diseases (NTDs) in Togo is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, and soil transmitted helminths. In 2020, preventive chemotherapy coverage was 100% for the three diseases (lymphatic filariasis, schistosomiasis and trachoma). The coverage was 84% for onchocerciasis and 57% for soil transmitted helminths. Overall, the NTD preventive chemotherapy coverage index for Togo in 2020 is 86, which represents an increase compared with the 2019 index value (77).

1 RMNCAH metrics, recommended actions and response tracked through WHO
guidelines during the pandemic. This includes prioritising key necessary catch up activities. The country was certified as having eliminated Trachoma as a public health problem, in addition to the other diseases eliminated by the country (Lymphatic Filariasis and Human African Trypanosomiasis).

Togo has responded positively to the RMNCAH recommended action addressing low coverage of ARTs in children, with a 6% increase in coverage recently observed, and continues to track progress as these actions are implemented.
