Malaria is endemic in all parts of the United Republic of Tanzania, with seasonal peaks. The annual reported number of malaria cases in 2020 was 6,015,706 with 2,569 deaths.
Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic has disrupted routine health services considerably, and the economic impacts continue to hamper health systems recovery. It is vitally important that we focus on recovering lost ground in delivering essential life-saving interventions during this difficult time, sustaining progress towards the SDG targets for Malaria, Neglected Tropical Diseases and Reproductive, Maternal, New-born, Child and Adolescent health.

Given the difficulties in securing essential health commodities in Africa during the COVID-19 pandemic, it is of vital importance that countries sign, ratify and deposit the African Medicines Agency (AMA) instrument with the AUC in order to improve access to quality, safe and efficacious medical products in Africa. The country is encouraged to complete this process. Early procurement of essential health commodities is also highly recommended whilst long delivery times persist.

The country has been affected by the continent-wide restriction of access to COVID-19 vaccines and had only been able to cover 31% of their population by October 2022. The country, working with partners, should invest in education and behaviour change communication to increase the uptake of COVID vaccines and therapeutics.

Malaria Progress
The United Republic of Tanzania secured sufficient resources to sustain universal coverage of LLINs, ACTs and RDTs in 2022, and the country has procured sufficient LLINs to achieve 100% operational coverage. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and has completed the national insecticide resistance monitoring and management plan. The country has also carried out drug resistance testing since 2018 and has reported the results to WHO. The national strategic plan includes activities targeting refugees. The country is also showing leadership in malaria control through its participation in the High Burden High Impact approach, and the launch of the Zero Malaria Starts with Me campaign.

In line with the priority agenda of the ALMA chair, His Excellency President Umaro Sissoco Embaló, the country has enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control and Elimination Scorecard, although the scorecard is not yet shared to the ALMA Scorecard Hub. The country is working on the launch of the End Malaria Council and Fund.

Impact
The annual reported number of malaria cases in 2020 was 6,015,706 with 2,569 deaths.

Key Challenges
- Maintaining malaria high on the political and funding agenda on the island of Zanzibar as the burden continues to drop.
- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

<td>Ensure that malaria services including case management and vector control are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic</td>
<td>Q4 2022</td>
<td>✔️</td>
<td>The country continues to have sufficient stocks for ACTs and RDTs – with stock levels of 12 and 5 months, respectively. As part of a plan to mitigate the impact of the COVID-19 pandemic, the NMCP and other implementing partners have recently completed revising the SBC malaria tailored messages which have reflected and incorporated current developments in COVID prevention and vaccination. The NMCP has also completed training of community health workers for case management in 10 of the hard-to-reach high burden councils from Kagera, Katavi, Geita, Kigoma and Ruvuma regions. On the other hand, training of private sector/corps and laboratory personnel from private health facilities has not yet started due to lack of resources.</td>

The United Republic of Tanzania has responded positively to the recommended actions addressing iCCM and continues to track progress as this action is implemented.

### RMNCAH and NTDs

#### Progress

The country has significantly enhanced the tracking and accountability mechanisms with the development and launch of the Tanzania Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard, and with the development of the multi-sectoral nutrition scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in the United Republic of Tanzania is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. In 2020, preventive chemotherapy coverage was 47% for schistosomiasis, 38% for soil transmitted helminths, 28% for onchocerciasis, and 0% for both lymphatic filariasis and trachoma. Overall, the NTD preventive chemotherapy coverage index for United Republic of Tanzania in 2020 is 3 which represent a very substantial decrease compared to the 2019 index value (41).

The country has enhanced the tracking and accountability mechanisms with the recent development of the NTD scorecard.

<tr>
<td>RMNCAH¹: Impact</td>
<td>Ensure that essential RMNCAH services are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic. Address any stock-outs of essential RMNCAH commodities</td>
<td>Q4 2022</td>
<td>The country continues to report on COVID-19 cases and there were few reports of stock outs of RMNCAH commodities. There are also no reports of services being adversely affected by the COVID-19 pandemic as RMNCAH interventions are being implemented using COVID-19 sensitive national guidelines. The RMNCAH products reported as out of stock included Co-Packs for Diarrhoea treatment kits (ORS and ZINC) and Etonogestrel MG Implants and this was caused by the delay in the delivery of this shipment caused by the global shortage of these products. The overall availability of other RMNCAH products in the e-LMIS system was 85%.</td>
<td></td>
</tr>
<tr>
<td>NTDs</td>
<td>Recognising the negative impact of COVID-19 on the 2020 MDA coverage, ensure that NTD interventions including MDAs, vector control and Morbidity Management and Disability Prevention are sustained and implemented whilst using Covid-19 sensitive guidelines during the pandemic. This includes prioritizing key necessary catch up activities</td>
<td>Q4 2022</td>
<td>The country is conducting planned NTD prevention and control interventions whilst respecting COVID-19 prevention measures. In the second and third quarter of 2022, in addition to NTD routine activities, the country conducted onchocerciasis and trachoma MDAs. MDA for schistosomiasis and Soil Transmitted Helminthiasis is under preparation. The country reports that no drugs expired last year and all the NTD medicines will be used before the expiry date.</td>
