Benin ALMA Quarterly Report Quarter Four, 2020

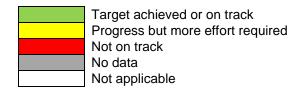

Scorecard for Accountability and Action

	_	
LLIN financing 2020 projection (% of need)		9
Public sector RDT financing 2020 projection (% of need)		10
Public sector ACT financing 2020 projection (% of need)		
World Bank rating on public sector management and institutions 2019 (CPIA Cluster D)		3.
Insecticide Resistance Monitoring, Implementation ar	nd l	Impact
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010		
Insecticide resistance monitored since 2015 and data reported to WHO		
National Insecticide Resistance Monitoring and Management Plan		
RDTs in stock (>9 months stock)		
ACTs in stock (>9 months stock)	•	
LLIN/IRS campaign on track		
Country Reporting Launch of Zero Malaria Starts with Me Campaign		
Scale of Implementation of iCCM		
Operational LLIN/IRS coverage (% of at risk population)		10
On track to reduce case incidence by ≥40% by 2020 (vs 2015)		
On track to reduce case mortality by ≥40% by 2020 (vs 2015)		
Tracer Indicators for Maternal and Child Health and N	NTE	Os
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2019)	▼	2
Estimated % of Total Population living with HIV who have access to antiretroviral therapy (2019)		6
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2019)		4
% deliveries assisted by skilled birth attendant		7
Postnatal care (within 48 hrs)		6
Exclusive breastfeeding (% children < 6 months)		4
Vitamin A Coverage 2018 (2 doses)		
DPT3 coverage 2019 (vaccination among 0-11 month olds)		7

Malaria is endemic throughout Benin. The annual reported number of malaria cases in 2019 was 3,654,790 with 2,589 deaths.

Key

Benin ALMA Quarterly Report Quarter Four, 2020

Malaria

Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential lifesaving interventions during this difficult time including for Reproductive, Maternal, Newborn, Child and Adolescent health, Neglected Tropical Diseases and malaria.

For Benin, it was of vital importance that the universal coverage campaign for long-lasting insecticidal nets (LLINs) went ahead as scheduled in 2020, and the country is congratulated for this achievement. Under the worst-case scenario, in which the LLIN campaign was suspended and with a 75% reduction in access to effective antimalarial medicines, WHO estimated that this would result in a 33.4% increase in malaria cases, and a 98.3% increase in malaria deaths in Benin. This scenario would represent a reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2021 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19.

Progress

Benin has distributed sufficient LLINs to achieve universal operational coverage of the targeted at-risk population and has recently completed the LLIN universal coverage campaign. The country successfully raised resources for most of the financing of the required number of RDTs and LLINs in 2020 and has good stocks of essential malaria commodities. Benin has scaled up implementation of iCCM. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. Benin has significantly enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Scorecard. Benin has achieved a high rating in terms of public sector management systems (CPIA cluster D).

Impact

The annual reported number of malaria cases in 2019 was 3,654,790 with 2,589 deaths.

Key Challenges

- Insecticide resistance threatens vector control effectiveness.
- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Impact	Ensure that malaria services including case management and vector control are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic	Q4 2020		The country completed the LLIN campaign during the COVID-19 pandemic through a door to door campaign. High coverage was achieved. Case management has been continued, with the country designing an algorithm for the treatment of malaria during the pandemic. The SMC campaigns were implemented, with four rounds completed by the end of Q4 2020
Address funding	With the GF funding application being sent back for iteration, work to address the comments of the TRP and resubmit	Q4 2020		The country resubmitted their GF funding request

New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
Impact	Investigate and address the reasons for the increase in estimated malaria incidence between 2015 and 2019, which means that the country is not on track to achieve the 2020 target of a 40% reduction in malaria incidence	Q4 2021

RMNCAH

Progress

Benin has made good progress on tracer RMNCAH interventions, in particular skilled birth attendants, vitamin A and postnatal care coverage, and has recently increased coverage of ARTs in both children and in the total population.

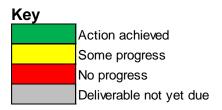

Progress in addressing Neglected Tropical Diseases (NTDs) in Benin is measured by using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage is 58% for schistosomiasis, 85% for lymphatic filariasis (85%), 75% for onchocerciasis and 79% for schistosomiasis. The country conducted trachoma impact surveys in 2019 which noted trachoma prevalence of less than 5% in 4 districts, and therefore trachoma PC was not conducted in these areas, Overall, the NTD preventive chemotherapy coverage index for Benin in 2019 is 20..

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
RMNCAH1: Optimise quality of care	Address the falling coverage of vitamin A	Q1 2021		Deliverable not yet due
RMNCAH ¹ : Impact	Ensure that essential RMNCAH services are sustained and implemented whilst using Covid-19 sensitive guidelines during the pandemic. Address any stock-outs of essential RMNCAH commodities	Q4 2020		Progress not reported

New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
NTDs	Implement preventive chemotherapy for trachoma including by allocating additional resources for Mass Drug Administration (MDA) and enhanced social mobilisation. Ensure that NTD interventions including MDA, vector control and Morbidity Management and Disability Prevention are sustained and implemented whilst using Covid-19 sensitive guidelines during the pandemic. This includes prioritising key necessary catch up activities	Q4 2021
