## Key

Malaria is endemic throughout Benin. The annual reported number of malaria cases in 2019 was 3,654,790 with 2,589 deaths.

Target achieved or on track Progress but more effort required Not on track No data Not applicable

# Malaria

## Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential life-saving interventions during this difficult time including for Reproductive, Maternal, Newborn, Child and Adolescent health, Neglected Tropical Diseases and malaria.

For Benin, it was of vital importance that the universal coverage campaign for longlasting insecticidal nets (LLINs) went ahead as scheduled in 2020, and the country is congratulated for this achievement. Under the worst-case scenario, in which the LLIN campaign was suspended and with a 75% reduction in access to effective antimalarial medicines, WHO estimated that this would result in a 33.4% increase in malaria cases, and a 98.3% increase in malaria deaths in Benin. This scenario would represent a reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2021 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19.

#### Progress

Benin has distributed sufficient LLINs to achieve universal operational coverage of the targeted at-risk population. The country successfully raised resources for the financing of the required number of ACTs, RDTs and LLINs in 2021 and has good stocks of essential malaria commodities. Benin has scaled up implementation of iCCM. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. Benin has achieved a high rating in terms of public sector management systems (CPIA cluster D).

In line with the legacy agenda of the ALMA chair, His Excellency President Uhuru Kenyatta, Benin has enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Scorecard, but this is not yet shared on the ALMA Scorecard Knowledge Hub.

#### Impact

The annual reported number of malaria cases in 2019 was 3,654,790 with 2,589 deaths.

## Key Challenges

- Insecticide resistance threatens vector control effectiveness.
- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

### **Previous Key Recommended Actions**

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Impact	Ensure that malaria services including case management and vector control are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic	Q4 2020		The country completed the 2021 IRS campaign during the ongoing COVID- 19 pandemic with high coverage achieved. Case management has been continued, with the country designing an algorithm for the treatment of malaria during the pandemic. The SMC campaign rolled out in July and remains on track. The country has ordered sufficient ACTs and RDTs for 2021

# RMNCAH

### Progress

Benin has made good progress on tracer RMNCAH interventions, in particular skilled birth attendants, vitamin A and postnatal care coverage, and has recently increased coverage of ARTs in both children and in the total population.

Progress in addressing Neglected Tropical Diseases (NTDs) in Benin is measured by using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage for trachoma in Benin is zero (0%), low 58% for schistosomiasis, 85% for lymphatic filariasis (85%), 75% for onchocerciasis and 79% for schistosomiasis. Overall, the NTD preventive chemotherapy coverage index for Benin in 2019 is 20 and shows a big decrease compared to 2018 index value (60).

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
RMNCAH <sup>1</sup> : Optimise quality of care	Address the falling coverage of vitamin A	Q1 2021		Progress not reported
RMNCAH <sup>1</sup> : Impact	Ensure that essential RMNCAH services are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic. Address any stock-outs of essential RMNCAH commodities	Q4 2020		Progress not reported
NTDs	Implement preventive chemotherapy for trachoma including by allocating additional resources for Mass Drug Administration (MDA) and enhanced social mobilisation. Ensure that NTD interventions including MDA, vector control and Morbidity Management and Disability Prevention are sustained and implemented	Q4 2021		The country is conducting NTD activities whilst respecting COVID-19 preventive measures. The country is preparing for the 2021 Onchocerciasis MDA and is waiting to receive the Ivermectin to be used. Also, the country conducted Morbidity Management and Disability Prevention (MMDP) in regards to Lymphatic Filariasis
