The entire population of Gabon is at high risk for malaria. Transmission is intense throughout the year in the northern part of the country and more seasonal in the south. The annual reported number of malaria cases in 2019 was 142,848 with 314 deaths.

## Key

## **Gabon ALMA Quarterly Report Quarter One, 2021**

#### Malaria

#### **Sustaining Essential Health Services During the COVID-19 Pandemic**

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential lifesaving interventions during this difficult time including for Reproductive, Maternal, Newborn, Child and Adolescent health, Neglected Tropical Diseases and malaria.

For Gabon, the country is encouraged to sustain the delivery of essential health services including malaria case management, during the COVID-19 pandemic. Under the worst-case scenario, in which there is a 75% reduction in access to effective antimalarial medicines, WHO estimate that there could be a 1.5% increase in malaria cases, and a 117% increase in malaria deaths in Gabon. This scenario would represent a complete reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2021 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19.

#### **Progress**

Gabon has recently submitted the results of insecticide resistance testing to WHO. The country reports that the majority of the population accesses RDTs and ACTs through the health insurance scheme.

In line with the legacy agenda of the ALMA chair, His Excellency President Uhuru Kenyatta, the country has planned for the launch of the Gabon End Malaria Fund in Q2 2021.

#### **Impact**

The annual reported number of malaria cases in 2019 was 142,848 with 314 deaths.

## **Key Challenges**

- Insufficient resources to achieve high coverage of essential malaria interventions.
- Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and Neglected Tropical Diseases.

#### **Previous Key Recommended Actions**

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Address vector control coverage	Address falling vector control coverage	Q1 2014		The country distributed 70,000 LLINs and Gabon has developed a resource mobilisation plan to fill vector control gaps including from the private sector. The country is working to launch its End Malaria Fund in Q2 2021

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Optimise quality of care	Provide data on the scale up iCCM implementation country wide	Q1 2017		The country plans to scale up iCCM with the training of 2,000 CHWs countrywide. However, there is a need to mobilise a budget of 2.9 million Euros in order to implement this. The country is hoping that the launch of the End Malaria Fund will contribute to filling some of the identified gaps including for iCCM
Impact	Ensure that malaria services including case management and vector control are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic	Q4 2020		The country has noted some reductions in access to health facilities during the COVID-19 pandemic. he country has distributed RDTs and 70,000 LLINs including to pregnant women. Zero malaria starts with me was launched in November. Resource mobilisation is ongoing to fill gaps in malaria programming with the launch of the Gabon End Malaria Council under development

Gabon has responded to the recommended actions addressing financing of anti-malarial commodities and continues to track progress as these actions are implemented.

## RMNCAH and NTDs

#### **Progress**

Gabon has achieved high coverage of the tracer RMNCAH interventions of skilled birth attendants, and has recently increased coverage of ARTs in children.

Progress in addressing Neglected Tropical Diseases (NTDs) in Gabon is shown using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, and soil transmitted helminths. Preventive chemotherapy coverage in Gabon is 0% for schistosomiasis, 0% for lymphatic filariasis, 0% for onchocerciasis, and 0% for soil transmitted helminths. Overall, the NTD preventive chemotherapy coverage index for Gabon in 2019 is 0, which represents a slight decrease compared with the 2018 index value (2).

**Previous Kev Recommended Actions** 

revious key kecommended Actions					
Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report	
RMNCAH <sup>1</sup> : Impact	Ensure that essential RMNCAH services are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic	Q4 2020		No progress reported	
RMNCAH <sup>1</sup> : Optimise quality of	Investigate and address the reasons for the lack of reported data on	Q2 2019		No progress reported	
care	vitamin A coverage				

<sup>&</sup>lt;sup>1</sup> RMNCAH metrics, recommended actions and response tracked through WHO

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
NTDs	Submit data for Preventive chemotherapy for Lymphatic Filariasis and Onchocerciasis and work to increase Soil transmitted Helminths preventive chemotherapy to reach the WHO targets.	Q4 2020		The country organized the first round of MDA for Soil Transmitted Helminths in February 2020 and the second round in December 2020. For Lymphatic Filariasis, the country is waiting for the PCR results and is mobilizing funds to resume mapping. For Onchocerciasis and Loiasis, three out of nine hypoendemic districts have completed operational research in order to determine any side effects related to ivermectin. The country is mobilizing funds for the six remaining districts. An MDA for LF is planned to take place in 2021

Gabon has responded positively to the RMNCAH recommended actions addressing low coverage of exclusive breastfeeding and continues to track progress as this action is implemented.
