# Djibouti ALMA Quarterly Report Quarter Two, 2018

#### **Scorecard for Accountability and Action**

Nearly 50% of the population of Djibouti is at low risk of malaria, while the remaining in the desert is free of malaria. The annual reported number of malaria cases in 2016 was 13,804.

## Key

# Djibouti ALMA Quarterly Report Quarter Two, 2017

#### Malaria

#### **Progress**

Djibouti has secured sufficient resources to fund the ACTs and RDTs required for 2018. The country has procured sufficient LLINs to achieve universal coverage. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO.

#### Key challenges

- Increases in malaria cases have been experienced in the country since 2015.
- Lack of resources to fully implement vector control 2018-2020.

#### **Impact**

The annual reported number of malaria cases in 2016 was 13,804. With the overall increase in the estimated malaria incidence between 2010 and 2016, WHO projects that the country will record an increase in malaria incidence by 2020.

**Previous Key Recommended Actions** 

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Impact	Investigate and address the reasons for the increase in malaria cases	Q4 2018		Djibouti is rolling out IRS in the areas where the malaria upsurge has occurred
Funding	Work to fill resource gaps to sustain universal coverage of vector control	Q4 2018		Djibouti has secured resources through the GF to support IRS in 2018
Enact high level policy and strategy change	Improve rule-based governance, quality of budgetary and financial management, efficiency of revenue mobilisation, quality of public administration, and transparency and accountability in the public sector	Q3 2013		No progress reported

### **MNCH and NTDs**

#### **Progress**

Djibouti has achieved high coverage of the tracer MNCH intervention skilled birth attendants.

Progress in addressing Neglected Tropical Diseases (NTDs) in Djibouti is measured using a composite index calculated from preventive chemotherapy coverage achieved for soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Djibouti is high for trachoma (100%), but low for soil transmitted helminths (0%). Overall, the NTD preventive chemotherapy coverage index for Djibouti in 2016 is 3, which represents a substantial decrease compared with the 2015 index value (32).

**Previous Key Recommended Actions** 

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
MNCH <sup>1</sup> : Optimise quality of care	Identify and address reasons for the decrease in coverage of DPT3	Q2 2018		No progress reported
NTDs	Work to return the Soil Transmitted Helminth Preventive Chemotherapy coverage levels to those of 2015	Q4 2018		The Ministry of Health submitted a successful request through WHO for resources from ESPEN to conduct the survey for Soil Transmitted Helminths and to support preparation for validation of elimination of trachoma and this activity is now underway

Djibouti has responded positively to the MNCH recommended action addressing low coverage of exclusive breastfeeding and coverage has recently increased, but the country continues to track progress as this action is implemented. Djibouti has responded positively to the MNCH recommended action addressing lack of data on postnatal care coverage and low coverage of ARTs and continues to track progress as these actions are implemented.
