Plan	
Country Reporting Launch of Zero Malaria Starts with Me Campaign	
Resistance Monitoring, Implementation and Impact	
Drug Resistance Monitoring Conducted (2018-2020) and data reported to WHO	
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	- 3
Insecticide resistance monitored since 2015 and data reported to WHO	
National Insecticide Resistance Monitoring and Management Plan	
RDTs in stock (>6 months stock)	
ACTs in stock (>6 months stock)	
LLIN/IRS campaign on track	
Operational LLIN/IRS coverage (% of at risk population)	100
On track to reduce case incidence by ≥40% by 2020 (vs 2015)	
On track to reduce case mortality by ≥40% by 2020 (vs 2015)	
Tracer Indicators for Maternal and Child Health, NTDs	and Covid 19
Scale of Implementation of iCCM	
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2020)	31
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2020)	45
Vitamin A Coverage 2020 (2 doses)	
DPT3 coverage 2020 (vaccination among 0-11 month olds)	98
% Population Fully Vaccinated Against COVID-19	

The annual reported number of malaria cases in 2020 was 75,756 with 3 deaths.

Key

Eritrea ALMA Quarterly Report Quarter One, 2022

Sustaining Essential Health Services During the COVID-19 Pandemic

The COVID-19 pandemic is putting an incredible strain on health systems across Africa. Health systems are required to maintain routine health services for other illnesses even as they handle the additional burden. In order to prevent widespread morbidity and mortality, it is of vital importance that we work to sustain the delivery of essential lifesaving interventions during this difficult time including for Reproductive, Maternal, Newborn, Child and Adolescent health and malaria.

For Eritrea, it was of vital importance to ensure that the universal coverage campaign for long-lasting insecticidal nets (LLINs) in 2020 and the Indoor Residual Spraying Campaign scheduled for 2021 went ahead, whilst taking into account physical distancing, in accordance with the guidance and recommendations from WHO and the RBM Partnership to End Malaria. Additionally, it is of vital importance that case management of malaria and other diseases is maintained through the health service during this difficult time. Without the LLIN campaign, coupled with the need to sustain essential health services including malaria case management, WHO estimate that there could be a 6.9% increase in malaria cases, and a 19.8% increase in malaria deaths in Eritrea. This scenario would represent a complete reversal in the substantial progress in malaria mortality reductions seen over the last 2 decades. WHO estimates that there were an additional 47,000 malaria deaths globally in 2020 due to service disruptions during the COVID-19 pandemic, leading to an estimated 7.5% increase in deaths.

It is essential to ensure the continuity of malaria, RMNCAH and NTD services in 2022 as the COVID-19 pandemic continues to impact our continent. This may include the implementation of any necessary catch-up activities and ensuring timely planning to account for potential delays in procurement and delivery. Any intervention must ensure the safety of communities and health workers given the ease of transmission of COVID-19

Given the difficulties in securing essential health commodities in Africa during the COVID-19 pandemic, it is of vital importance that countries sign, ratify and deposit the African Medicines Agency (AMA) instrument with the AUC in order to improve access to quality, safe and efficacious medical products in Africa. The country is encouraged to do this.

The country has been affected by the continent-wide restriction of access to COVID-19 vaccines. The country, working with partners, should invest in education and behaviour change communication to increase the uptake of COVID vaccines and therapeutics.

Malaria

Progress

Eritrea secured sufficient financing to maintain universal coverage of key anti-malarial interventions in 2022. The country has scaled up implementation of iCCM. Eritrea has recently increased coverage of vector control with 100% operational coverage of the targeted at risk population. Eritrea has recently reported the results of the insecticide resistance monitoring to WHO and has completed the national insecticide resistance monitoring and management plan. Eritrea has carried out drug resistance testing since 2018 and has reported the results to WHO. The national strategic plan includes activities targeting refugees.

In line with the legacy agenda of the ALMA chair, His Excellency President Uhuru Kenyatta, Eritrea has enhanced the tracking and accountability mechanisms for malaria

with the development of the Malaria Control Scorecard, however this scorecard is not yet publicly shared on the ALMA Scorecard Hub.

Impact

The annual reported number of malaria cases in 2020 was 75,756 with 3 deaths.

Key Challenge

 Sustaining the delivery of essential life-saving interventions during the COVID-19 pandemic including for Reproductive, Maternal, Newborn, Adolescent and Child health, malaria and NTDs.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Impact	Ensure that malaria services including case management and vector control are sustained and implemented whilst using COVID-19 sensitive guidelines during the pandemic	Q4 2022		The country has completed the universal coverage campaign, with nearly 2 million PBO nets distributed

New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
Policy	Sign, ratify and deposit the AMA instrument at the AUC	Q1 2023

RMNCAH and NTDs

Progress

Eritrea has achieved good coverage of the tracer RMNCAH intervention of DPT3.

Progress in addressing Neglected Tropical Diseases (NTDs) in Eritrea is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, schistosomiasis, and trachoma. In 2020, preventive chemotherapy coverage was 72% for trachoma, 51% for lymphatic filariasis and 8% for schistosomiasis. Overall, the NTD preventive chemotherapy coverage index for Eritrea in 2020 is 31, which represents a decrease compared with the 2019 index value (57).

Previous Key Recommended Actions

Objective	Action Item	Suggested completio n timeframe	Progress	Comments - key activities/accomplish ments since last quarterly report
RMNCAH¹: Impact	Ensure that essential RMNCAH services are sustained and implemented whilst using Covid-19 sensitive guidelines during the pandemic. Address any stock-outs of essential RMNCAH commodities	Q4 2020		No progress reported
NTDs	Recognising the negative impact of COVID-19 on the 2020 MDA coverage, ensure that NTD interventions including MDAs, vector control and Morbidity Management and Disability Prevention are sustained and implemented whilst using Covid-19 sensitive guidelines during the pandemic. This includes prioritizing key necessary catch up activities	Q4 2022		Deliverable not yet due

Eritrea has responded positively to the RMNCAH recommended actions addressing low coverage of ARTs in children under 14 years of age (with a recent 5% increase in coverage), as well as lack of data on vitamin A coverage. The country continues to track progress as these actions are implemented.
