

### Scorecard for Accountability and Action

The entire population of Gabon is at high risk for malaria. Transmission is intense throughout the year in the northern part of the country and more seasonal in the south. The annual reported number of malaria cases in 2016 was 161,508 with 101 deaths.

#### Metrics

Commodities Financed and Financial Control	
LLIN financing 2017 projection (% of need)	0
Public sector RDT financing 2017 projection (% of need)	
Public sector ACT financing 2017 projection (% of need)	
World Bank rating on public sector management and institutions 2016 (CPIA Cluster D)	
Insecticide Resistance Monitoring, Implementation and Impact	
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	0
Insecticide resistance monitored since 2015 and data reported to WHO	
National Insecticide Resistance Monitoring and Management Plan	
Scale of Implementation of iCCM (2016)	
Operational LLIN/IRS coverage (% of at risk population)	3
Change in malaria incidence rate (2010–2016)	
Tracer Indicators for Maternal and Child Health and NTDs	
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2016)	1
Estimated % of Total Population living with HIV who have access to antiretroviral therapy (2016)	63
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2016)	38
% deliveries assisted by skilled birth attendant	89
Postnatal care (within 48 hrs)	59
Exclusive breastfeeding (% children < 6 months)	6
Vitamin A Coverage 2015 (2 doses)	
DPT3 coverage 2016 (vaccination among 0-11 month olds)	75

#### Key

## Malaria

### Impact

The annual reported number of malaria cases in 2016 was 161,508 with 101 deaths.

### Key Challenges

- Insufficient resources to achieve high coverage of essential malaria interventions.
- The country has a less than 20% malaria case reporting rate by surveillance systems.

### Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Address vector control coverage	Address falling vector control coverage	Q1 2014		The country is working to mobilise resources for a universal coverage campaign in 2018
Vector Control	Report on the status of both insecticide resistance and resistance monitoring and finalise and implement the national insecticide resistance monitoring and management plan	Q1 2017		Gabon's mapping of malaria vectors and their resistance to insecticides programme has been postponed due to a lack of resources and this in turn has delayed the development of the national insecticide resistance monitoring and management plan
Optimise quality of care	Provide data on the scale up iCCM implementation country wide	Q1 2017		No progress reported
Impact	Investigate and address the reasons for the WHO estimated increase of greater than 20% in the malaria incidence rate for the period 2010 - 2015	Q4 2017		Gabon reports that coverage of essential malaria control interventions has declined since the loss of Global Fund financing in 2010. A small increase in cases, and a greater than 20% increase in deaths has been recorded between 2015 and 2016

Gabon has responded to the recommended actions addressing financing of anti-malarial commodities and continues to track progress as these actions are implemented.

## MNCH and NTDs

### Progress

Gabon has achieved high coverage of the tracer MNCH interventions of skilled birth attendants and has recently increased coverage of ARTs in the total population.

Progress in addressing Neglected Tropical Diseases (NTDs) in Gabon is shown using a composite index calculated from preventive chemotherapy coverage achieved for

lymphatic filariasis, onchocerciasis, schistosomiasis, and soil transmitted helminths. Preventive chemotherapy coverage in Gabon is 36% for schistosomiasis, but is low for lymphatic filariasis (0%), onchocerciasis (0%), and soil transmitted helminths (14%). Overall, the NTD preventive chemotherapy coverage index for Gabon in 2016 is 1, which represents a slight increase compared with the 2015 index value (0).

### Previous Key Recommended Actions

Gabon has responded positively to the MNCH recommended actions addressing low coverage of exclusive breastfeeding, and lack of data on vitamin A and continues to track progress as these actions are implemented.

### New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
NTDs	Scale up schistosomiasis preventive chemotherapy (PC). Complete mapping for onchocerciasis and loasis. For Lymphatic Filariasis, start twice-yearly Albendazole preventive chemotherapy in districts with confirmed cases and reconfirm overall endemicity during Onchocerciasis mapping.	Q4 2018
