

Scorecard for Accountability and Action

Malaria transmission in Kenya ranges from intense in lowland areas to unstable epidemic-prone in the highlands. The annual reported number of malaria cases in 2014 was 9,655,905 with 472 deaths.

Metrics

Commodities Financed and Financial Control	
LLIN financing 2016 projection (% of need)	91
Public sector RDT financing 2016 projection (% of need)	100
Public sector ACT financing 2016 projection (% of need)	100
World Bank rating on public sector management and institutions 2015 (CPIA Cluster D)	3.4
Insecticide Resistance Monitoring, Implementation and Impact	
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	4
Insecticide resistance monitored since 2014 and data reported to WHO	
National Insecticide Resistance Monitoring and Management Plan	
Scale of Implementation of iCCM (2013)	
Operational LLINIRS coverage (% of at risk population)	91
>75% Decrease in Malaria Incidence Projected 2000–2015	
Tracer Indicators for Maternal and Child Health	
Estimated % of Total Population living with HIV who have access to antiretroviral therapy (2015)	59
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2015)	73
% deliveries assisted by skilled birth attendant	62
Postnatal care (within 48 hrs)	53
Exclusive breastfeeding (% children < 6 months)	61
Vitamin A Coverage 2014 (2 doses)	28
DPT3 coverage 2015 (vaccination among 0-11 month olds)	89

Malaria

Progress

Kenya has made steady progress in scaling-up malaria control interventions. The country has secured the majority of the resources required to sustain universal coverage of essential malaria control interventions in 2016. The country has carried out insecticide resistance monitoring since 2014 and has reported the results to WHO. Kenya has a high rating in terms of public sector management systems (CPIA cluster D). Kenya has recently completed the national insecticide resistance monitoring and management plan. The country has significantly enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control and Elimination Scorecard.

Impact

The annual reported number of malaria cases in 2014 was 9,655,905 with 472 deaths. Progress in reducing cases has been reported sub-nationally where interventions have been intensified. WHO, through modeling, estimates that there has been a less than 50% decrease in malaria incidence between 2000 and 2015. The 2015 Kenya Malaria Indicator Survey found that the malaria prevalence among children was 8 percent, a decline from 11 percent in 2010.

MNCH

Progress

Kenya has achieved high coverage of tracer MNCH interventions, including exclusive breastfeeding, DPT3 and ART coverage in children. The country has significantly enhanced the tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn and Child Health Scorecard.

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
MNCH ¹ : Optimise quality of care	Identify and address reasons for decreasing vitamin A coverage	Q4 2016		The country reports 9% increase in vitamin A coverage in 2014
