Mauritania ALMA Quarterly Report Quarter One, 2018

Malaria

Progress

Mauritania has secured sufficient resources to meet the LLIN, ACT and RDT requirements for 2018. The country is implementing iCCM at scale.

Impact

The annual reported number of malaria cases in 2016 was 159,225 with 317 deaths. With the overall increase in the estimated malaria incidence between 2010 and 2016, WHO projects that the country will record an increase in malaria incidence by 2020. The country experienced a more than 20% increase in cases between 2015 and 2016 and investigating and addressing the key underlying reason for this upsurge will be a key priority for 2018.

Key Challenge

• The country has a less than 20% malaria case reporting rate by surveillance systems.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Vector Control	Report to WHO on the status of insecticide resistance, resistance monitoring and on the status of the national insecticide resistance monitoring and management plan	Q1 2017		The country reports that resistance was detected recently to pyrethroids but not to organophosphates or carbamates. Further testing is planned following which, the country is planning to develop an insecticide resistance monitoring and management plan
Address funding	Ensure the GF malaria funding application is submitted by Q2 2018 and ensure that resources are allocated to malaria control at a level that is sufficient to sustain the gains made in recent years	Q2 2018		Deliverable not yet due but the country has commenced work on the GF funding application
Impact	Investigate and address the reasons for the WHO estimated increase of greater than 20% in the malaria incidence rate between 2015 and 2016	Q4 2018		Mauritania report that a dengue outbreak led to an increase in fever cases in 2016, leading to an increase in reports of clinical malaria

MNCH and NTDs

Progress

Mauritania has achieved high coverage of the tracer MNCH intervention of vitamin A coverage.

Progress in addressing Neglected Tropical Diseases (NTDs) in Mauritania is measured using a composite index calculated from preventive chemotherapy coverage achieved for schistosomiasis, and trachoma. Preventive chemotherapy coverage in Mauritania is low for schistosomiasis (0%), and trachoma (0%). Overall, the NTD preventive chemotherapy coverage index for Mauritania in 2016 is zero, which represents a decrease compared with the 2015 index value (16).

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
MNCH ¹ : Optimise quality of care	Work to accelerate coverage of ARTs in the total population and in children under 14 years of age	Q1 2017		No progress reported
NTDs	Re-establish preventive chemotherapy for schistosomiasis and act on the awaited results of impact surveys for trachoma	Q4 2018		In 2017, Mauritania conducted a deworming campaign targeting school age children, where Praziquantel and Albendazole were distributed, with a coverage of 98% for both. For Trachoma, Mauritania is in the phase of elimination and there are few endemic zones, with a prevalence less than 5%. Coverage for schistosomiasis was reported at 98%
