Mozambique ALMA Quarterly Report Quarter Two, 2018

Scorecard for Accountability and Action

Metrics

Commodities Financed and Financial Control	
LLIN financing 2018 projection (% of need)	100
Public sector RDT financing 2018 projection (% of need)	100
Public sector ACT financing 2018 projection (% of need)	100
World Bank rating on public sector management and institutions 2017 (CPIA Cluster D)	3.1

Insecticide Resistance Monitoring, Implementation and Impact

Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	4
Insecticide resistance monitored since 2015 and data reported to WHO	
National Insecticide Resistance Monitoring and Management Plan	
Scale of Implementation of iCCM (2017)	
Operational LLIN/IRS coverage (% of at risk population)	100
Reduced Malaria Incidence by >40% by 2020 (vs 2015) (projected)	n.

Key

Target achieved or on track Progress but more effort required Not on track No data Not applicable

Malaria transmission is seasonal in almost all areas of Mozambique. The annual reported number of malaria cases in 2016 was 8,520,376 with 1 685 deaths.

Malaria

Progress

Mozambique secured sufficient financing to sustain universal coverage of ACTs, RDTs, IRS and LLINs in 2018 and has carried out sufficient IRS and procured sufficient LLINs to achieve 100% operational coverage of vector control. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. Mozambique has also completed the national insecticide resistance monitoring and management plan. Mozambique has also scaled up implementation of iCCM. The country has enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control and Elimination Scorecard.

Impact

The annual reported number of malaria cases in 2016 was 8,520,376 with 1,685 deaths.

Key Challenges

- High staff turnover in recent years is affecting programme efficiency.
- There is a need to strengthen cross border collaboration with neighbouring countries.

MNCH and NTDs

Progress

Mozambique has recently increased coverage of ARTs in children and in the total population. The country has significantly enhanced the tracking and accountability mechanisms with the development of the Reproductive, Maternal, Newborn, Adolescent and Child Health Scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in Mozambique is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in Mozambique is high for schistosomiasis (93%). Coverage is good for lymphatic filariasis (74%), 57% for soil transmitted helminths and 45% for trachoma. Coverage is low for onchocerciasis (0%). Overall, the NTD preventive chemotherapy coverage index for Mozambique in 2016 is 18, which represents a substantial increase compared with the 2015 index value (1).

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
NTDs	Given the good coverage achieved in Soil Transmitted Helminths (STH), Schistosomiasis, Trachoma, and Lymphatic Filaraisis Preventive Chemotherapy (PC), confirm the status of Onchocerciasis transmission and undertake Onchocerciasis elimination mapping, starting at the Malawi border	Q4 2018		Mozambique is planning to carry out the mapping of onchocerciasis in districts neighbouring Malawi and Tanzania. Funding gaps have delayed the implementation of this plan to date. The country has requested technical and financial support from WHO

Previous Key Recommended Actions

Mozambique has responded positively to the MNCH recommended actions addressing low coverage of ARTs in children, with recent increases observed, and the lack of data on postnatal care and continues to track progress as these actions are implemented.

New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
MNCH ¹ : Optimise quality of care	Investigate and address the reasons for the reported decrease in vitamin A coverage	Q2 2019
