DPT3 coverage 2017 (vaccination among 0-11

Vitamin A Coverage 2016 (2 doses)

São Tomé and Príncipe ALMA Quarterly Report, Quarter One, 2019

Malaria

Progress

São Tomé and Príncipe secured sufficient resources to finance the ACTs, RDTs and LLINs required for 2019 and has achieved 100% operational coverage of vector control. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO, and has recently completed the insecticide resistance monitoring and management plan. The country has decreased the estimated malaria mortality rate by more than 40% since 2010. São Tomé and Príncipe has significantly enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Elimination Scorecard.

Impact

The annual reported number of malaria cases in 2017 was 2,241 with zero deaths.

Key Challenges

- Significant reduction in funding from the Global Fund and other donors has significantly reduced the resources available for malaria control.
- Malaria upsurges observed.

Previous Key Recommended Actions

The country has responded positively to the recommended actions addressing iCCM scale-up and finalization of the national insecticide resistance monitoring and management plan and continues to track progress as these actions are implemented.

New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
Impact	Investigate and address the reasons for the increase in malaria cases	Q4 2019

RMNCAH and NTDs

Progress

São Tomé and Príncipe has achieved high coverage in the tracer RMNCAH interventions DPT3 vaccination coverage, skilled birth attendants and exclusive breastfeeding and postnatal care.

Progress in addressing Neglected Tropical Diseases (NTDs) in Sao Tomé and Principé is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, schistosomiasis, and soil transmitted helminths. The country has not reported the preventive chemotherapy coverage for lymphatic filariasis, schistosomiasis, and soil transmitted helminths in 2017 to WHO.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
NTDs	As a priority, submit the data on Preventive Chemotherapy (PC) coverage of Lymphatic Filariasis, Schistosomiasis and Soil Transmitted Helminths	Q1 2019		No progress reported

São Tomé and Príncipe has responded positively to the RMNCAH recommended actions addressing the low coverage of vitamin A and the lack of data for ARTs, and continues to track progress as these actions are implemented.
