

Scorecard for Accountability and Action

Malaria is endemic in all parts of the United Republic of Tanzania, with seasonal peaks. The annual reported number of malaria cases in 2017 was 5,597,715 with 3,685 deaths.

Metrics

Commodities Financed and Financial Control	
LLIN financing 2019 projection (% of need)	82
Public sector RDT financing 2019 projection (% of need)	100
Public sector ACT financing 2019 projection (% of need)	100
World Bank rating on public sector management and institutions 2018 (CPIA Cluster D)	3.0
Insecticide Resistance Monitoring, Implementation and Impact	
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010	4
Insecticide resistance monitored since 2015 and data reported to WHO	
National Insecticide Resistance Monitoring and Management Plan	
Scale of Implementation of iCCM (2017)	
Operational LLINIRS coverage (% of at risk population)	67
Change in Estimated Malaria Incidence(2010–2017)	
Change in Estimated Malaria Mortality rate(2010–2017)	
Tracer Indicators for Maternal and Child Health and NTDs	
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2017)	88
Estimated % of Total Population living with HIV who have access to antiretroviral therapy (2018)	71
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2018)	65
% deliveries assisted by skilled birth attendant	64
Postnatal care (within 48 hrs)	34
Exclusive breastfeeding (% children < 6 months)	59
Vitamin A Coverage 2017 (2 doses)	87
DPT3 coverage 2018 (vaccination among 0-11 month olds)	98

Malaria

Progress

The United Republic of Tanzania secured sufficient resources to sustain universal coverage of LLINs, ACTs, and RDTs in 2019, and the country has procured sufficient LLINs to achieve 100% operational coverage. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and has completed the national insecticide resistance monitoring and management plan. The United Republic of Tanzania has a high rating in terms of public sector management systems (CPIA cluster D). The country has enhanced the tracking and accountability mechanisms for malaria with the development of a Malaria Control and Elimination Scorecard. The country is also showing leadership in malaria control through its participation in the High Burden High Impact approach.

Impact

The annual reported number of malaria cases in 2017 was 5,597,715 with 3,685 deaths.

Key Challenges

- Maintaining malaria high on the political and funding agenda on the island of Zanzibar as the burden continues to drop.
- The limited resources in the GF malaria allocation compared to previous allocations.

Previous Key Recommended Action

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Vector Control	Address falling vector control coverage	Q4 2019		Deliverable not due but just over 600,000 LLINs were delivered to the country in the last quarter

The United Republic of Tanzania has responded positively to the recommended actions addressing iCCM and continues to track progress as this action is implemented.

New Key Recommended Action

Objective	Action Item	Suggested completion timeframe
Enact high level policy and strategy change	Improve rule-based governance, quality of budgetary and financial management, efficiency of revenue mobilisation, quality of public administration, and transparency and accountability in the public sector	Q4 2019

RMNCAH and NTDs

Progress

The United Republic of Tanzania has also made progress on tracer RMNCAH interventions including vitamin A, DPT3, and exclusive breastfeeding, and has recently increased coverage of ARTs in both the total population and children. The country has significantly enhanced the tracking and accountability mechanisms with the development and launch of the Tanzania Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard, and with the development of the multi-sectoral nutrition scorecard.

Progress in addressing Neglected Tropical Diseases (NTDs) in the United Republic of Tanzania is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis,

schistosomiasis, soil transmitted helminths and trachoma. Preventive chemotherapy coverage in United Republic of Tanzania is high for schistosomiasis (100%), soil transmitted helminths (94%), lymphatic filariasis (84%), trachoma (82%) and onchocerciasis (81%). Overall, the NTD preventive chemotherapy coverage index for United Republic of Tanzania in 2017 is 88, which represents a very substantial increase compared with the 2016 index value (44).

Previous Recommended Action

The United Republic of Tanzania has responded positively to the RMNCAH recommended actions addressing low coverage of postnatal care and continues to track progress as these actions are implemented.
