The entire population of Ghana is at risk of malaria. The annual reported number of malaria cases in 2021 was 6,077,543 with 277 deaths.
Malaria
Global Fund Allocation
The Global Fund announced that Ghana will receive US$234 million for HIV, tuberculosis, malaria, and health systems strengthening as the country allocation for 2024-2026. The Global Fund has determined the total allocation amount based on Ghana's disease burden and income level, as well as several other factors. The malaria component is also allocated a specific proportion of the total, according to a formula developed by the Global Fund that takes into account several factors, including disease burden and previous disbursements. For Ghana this is calculated at US$ 120.8 million. The allocations to the individual disease components are not fixed, and can be adjusted according to decisions made at country level. Ghana is urged to ensure that resources are allocated to malaria control from the overall Global Fund country allocation, as well as from domestic resources, to accelerate progress. The Global Fund resources are especially important in the current resource constrained environment. The ongoing economic crisis, increased costs of doing business, and the need to introduce newer more expensive commodities to address insecticide and drug resistance mean that countries may experience shortfalls in sustaining their life-saving malaria essential services.

Progress
The country continues to work on strengthening and maintaining health services following the devastating impact of the COVID-19 pandemic. In this regard, Ghana has secured sufficient resources for the essential anti-malarial commodities required to sustain coverage in 2023 and has distributed sufficient numbers of LLINs and carried out IRS sufficient to achieve 100% operational coverage of the targeted at-risk population. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and has carried out drug resistance testing since 2018 and has reported the results to WHO. Ghana has scaled up coverage of iCCM. The country is also showing leadership in malaria control through its participation in the High Burden High Impact approach. Ghana has also launched its Zero Malaria Starts with Me campaign. Ghana has decreased the estimated malaria incidence by more than 40% since 2015.

Impact
The annual reported number of malaria cases in 2021 was 6,077,543 with 277 deaths.

Key Challenge
- Insecticide resistance threatens vector control effectiveness.

Previous Key Recommended Action
- Ghana has responded positively to the recommended action addressing the inclusion of refugees and IDPs in the national strategic plan and continues to track progress as actions are implemented.
RMNCAH and NTDs

Progress
The country has achieved high coverage of tracer RMNCAH DPT3. The country has significantly enhanced the tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn and Child Health Scorecard, including with the introduction of community level scorecards. The country has also published the RMNCAH and community scorecards on the ALMA Scorecard Hub.

Progress in addressing Neglected Tropical Diseases (NTDs) in Ghana is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. In 2021, preventive chemotherapy coverage was 100% for trachoma, 100% soil-transmitted helminths, 70% for lymphatic filariasis, 59% for schistosomiasis and 49% for onchocerciasis. Overall, the NTD preventive chemotherapy coverage index for Ghana in 2021 is 73, which represents a very substantial increase compared with the 2020 index value (0).

Previous Key Recommended Actions
Ghana has responded positively to the RMNCAH recommended action addressing the low coverage of vitamin A and continues to track progress as actions are implemented.
