The entire population of Guinea-Bissau is at risk of malaria. The annual reported number of malaria cases in 2022 was 185,156 with 461 deaths.
Malaria
Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. We must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. AU Member States face a $1.5 billion gap just to sustain existing, yet inadequate, levels of malaria-related services between now and 2026. To get back on track and eliminate malaria, we will need to mobilise another $5.2 billion dollars annually to fully finance our national malaria plans. Climate change presents a significant threat to the progress that we have made. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Climate disasters displace millions and destroy roads and health facilities, reducing access to health services. There is urgency to decarbonise and reduce our carbon footprint. We must implement integrated and multisectoral solutions, and adapt our health systems to the threats of both climate change and pandemics. We must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. The scaling up of these interventions will help us achieve our goal of eliminating malaria. This will require integrated approaches with malaria as a pathfinder for pandemic preparedness, climate change and health, Primary Health Care and Universal Health Coverage. We must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD councils and Funds, which have raised over US$50 million.

Progress
Guinea-Bissau secured sufficient resources to sustain coverage of LLINs, ACTs, RDTs and LLINs in 2024-26. The country has submitted data to WHO on the insecticide resistance status.

In line with the priority agenda of the ALMA chair, His Excellency President Umaro Sissoco Embaló, Guinea-Bissau has launched the End Malaria and NTD Council. The country has recently developed their Malaria Scorecard for Accountability and Action and has posted the scorecard to the ALMA Scorecard Hub.

Impact
The annual reported number of malaria cases in 2022 was 185,156 with 461 deaths.

Key Challenge
- Funding gaps to fully implement the malaria national strategic plan.
The country has responded to the recommended action on drug resistance and insecticide resistance monitoring and is continuing to track progress as these actions are implemented.

Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress
The country has enhanced accountability and action for RMNCAH with the recent development of the Guinea-Bissau RMNCAH scorecard.

Previous Key Recommended Action
Guinea Bissau has responded positively to the RMNCAH recommended actions addressing low coverage of vitamin A and continues to track progress as actions are implemented.

Neglected Tropical Diseases

Progress
Progress in addressing Neglected Tropical Diseases (NTDs) in Guinea-Bissau is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. In 2022, preventive chemotherapy coverage was 58% for schistosomiasis, 34% for soil-transmitted helminths, 28% for lymphatic filariasis, 100% for trachoma and 35% for onchocerciasis. Overall, the NTD preventive chemotherapy coverage index for Guinea-Bissau in 2022 is 45, which represents a very substantial increase compared with the 2021 index value of 4. The country did not reach any WHO MDA coverage target in 2022. The country has significantly increased accountability and action for NTDs with the launch of the NTD scorecard tool. Guinea Bissau has signed the Kigali declaration.
