Malaria is endemic in all parts of Malawi. The annual reported number of malaria cases in 2022 was 4,251,068 with 1,829 deaths.
**Malaria**

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. We must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. AU Member States face a $1.5 billion gap just to sustain existing, yet inadequate, levels of malaria-related services between now and 2026. To get back on track and eliminate malaria, we will need to mobilise another $5.2 billion dollars annually to fully finance our national malaria plans. Climate change presents a significant threat to the progress that we have made. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Climate disasters displace millions and destroy roads and health facilities, reducing access to health services. There is urgency to decarbonise and reduce our carbon footprint. We must implement integrated and multisectoral solutions, and adapt our health systems to the threats of both climate change and pandemics. We must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the *Anopheles stephensi* mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. The scaling up of these interventions will help us achieve our goal of eliminating malaria. This will require integrated approaches with malaria as a pathfinder for pandemic preparedness, climate change and health, Primary Health Care and Universal Health Coverage. We must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD councils and Funds, which have raised over US$50 million.

**Progress**

Malawi has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. The country has also developed an insecticide resistance monitoring and management plan and in response to the insecticide resistance status has rolled out next generation mosquito nets and insecticides. Malawi has launched the Zero Malaria Starts with Me campaign. The country has secured sufficient resources to cover the priority ACT, RDT and LLIN requirements for 2024-2026.

In line with the priority agenda of the ALMA chair, His Excellency President Umaro Sissoco Embaló, Malawi has significantly enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Control Scorecard and is planning to post the scorecard to the ALMA Scorecard Hub. The NTD scorecard has already been posted to the Scorecard Hub. The country should consider establishing an End Malaria Council and Fund to enhance domestic resource mobilization and multi-sectoral action.

**Impact**

The annual reported number of malaria cases in 2022 was 4,251,068 with 1,829 deaths.

**Key Challenge**

- Resource gaps to fully implement the malaria national strategic plan.
Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress
Malawi has enhanced the tracking and accountability mechanisms with the development and launch of the Reproductive, Maternal, Newborn and Child Health Scorecard.

Previous Key Recommended Action
The country has responded to the recommended action on low coverage of vitamin A and is working to address this challenge.

Neglected Tropical Diseases

Progress
Progress in addressing Neglected Tropical Diseases (NTDs) in Malawi is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis, soil transmitted helminths and trachoma. In 2022, preventive chemotherapy coverage was 100% for both lymphatic filariasis and trachoma (as both are eliminated), 82% for onchocerciasis, 30% for schistosomiasis and 14% for soil-transmitted helminthiasis. Overall, the NTD preventive chemotherapy coverage index for Malawi in 2022 is 51, which represents a substantial decrease compared with the 2021 index value (59). The country reached WHO MDA coverage for onchocerciasis only. Malawi has signed the Kigali declaration. Malawi has significantly enhanced the tracking and accountability mechanisms for NTDs with the development of a NTD Scorecard tool.
