Mali ALMA Quarterly Report Quarter Two, 2024

Scorecard for Accountability and Action

Financing		
LLIN financing (2024-2026) projection (% of need)		
Public sector ACTs and RTDs financing (2024-2026) projection (% of need)		
% of National Malaria Strategic Plan Financed (2024- 2026)		
Policy		
Signed, ratified and deposited the AMA instrument at the AUC		V.
Malaria activities targeting refugees in Malaria Strategic Plan		
Malaria activities targeting IDPs in Malaria Strategic Plan		
Zero Malaria Starts With Me Launched		
End Malaria Council and Fund Launched		
Resistance Monitoring, Implementation and Impact		
Drug efficacy studies conducted since 2019 and data reported to WHO		
Insecticide classes with mosquito resistance in representative sentinel sites confirmed since 2010		
Insecticide resistance monitored since 2015 and data reported to WHO		
RDTs in stock (>6 months stock)		
ACTs in stock (>6 months stock)		
LLIN/IRS campaign on track		
% of vector control in the last year with next generation materials		
On track to reduce malaria incidence by at least 75% by 2025 (vs 2015)		
On track to reduce malaria mortality by at least 75% by 2025 (vs 2015)		
Tracer Indicators for Maternal and Child Health and NTDs	S	
Mass Treatment Coverage for Neglected Tropical Disease (NTD index, %)(2022)		8
% of Neglected Tropical Disease MDAs Achieving WHO Targets		8
Estimated % of children (0–14 years old) living with HIV who have access to antiretroviral therapy (2023)	•	4
Vitamin A Coverage 2022 (2 doses)		7
DPT3 coverage 2023 (vaccination among 0-11 month		7

Malaria transmission is more intense in the south of Mali. The annual reported number of malaria cases in 2022 was 4,004,297 with 1,498 deaths.

Key

Mali ALMA Quarterly Report Quarter Two, 2024

Malaria

Africa is at the centre of a perfect storm that threatens to disrupt malaria services and undo decades of progress. We must act urgently to both prevent and mitigate the adverse effects of the ongoing global financial crisis, increasing biological threats, climate change, and humanitarian crises. These threats represent the most serious emergency facing malaria in 20 years and will lead to malaria upsurges and epidemics if not addressed. AU Member States face a \$1.5 billion gap just to sustain existing, yet inadequate, levels of malaria-related services between now and 2026. To get back on track and eliminate malaria, we will need to mobilise another \$5.2 billion dollars annually to fully finance our national malaria plans. Climate change presents a significant threat to the progress that we have made. Africa is disproportionately exposed to the risks of climate change and by the 2030s, 150 million additional people will be at risk of malaria because of warmer temperatures and increased rainfall. Climate disasters displace millions and destroy roads and health facilities, reducing access to health services. There is urgency to decarbonise and reduce our carbon footprint. We must implement integrated and multisectoral solutions, and adapt our health systems to the threats of both climate change and pandemics. We must also take action to confront the threats of insecticide and drug resistance, reduced efficacy of rapid diagnostic tests, and the Anopheles stephensi mosquito which spreads malaria in both urban and rural areas. The good news is that the malaria toolkit continues to expand. WHO has approved the use of dual-insecticide mosquito nets that are 43% more effective than traditional mosquito nets and will address the impact of insecticide-resistance. New medicines for treating malaria and two malaria vaccines for children have also been approved with an increasing number of countries deploying these new tools. The scaling up of these interventions will help us achieve our goal of eliminating malaria. This will require integrated approaches with malaria as a pathfinder for pandemic preparedness, climate change and health, Primary Health Care and Universal Health Coverage. We must work to sustain and increase domestic resource commitments including through multisectoral End Malaria and NTD councils and Funds, which have raised over US\$60 million.

Progress

Mali has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO. The country has carried out insecticide resistance monitoring since 2015 and has reported the results to WHO and is rolling out next generation mosquito nets in response. The country is also showing leadership in malaria control through participation in the High Burden High Impact approach, and recently signed the Yaoundé Declaration. The country has also launched the Zero Malaria Starts with Me campaign. The country has good stocks of ACTs and RDTs.

In line with the priority agenda of the ALMA chair, His Excellency President Umaro Sissoco Embaló, Mali has significantly enhanced the tracking and accountability mechanisms for malaria with the development of the Malaria Control Scorecard, although this scorecard is not yet posted to the ALMA Scorecard Hub. The country should consider establishing an End Malaria Council and Fund to enhance domestic resource mobilization and multi-sectoral action.

Impact

The annual reported number of malaria cases in 2022 was 4,004,297 with 1,498 deaths.

Key Challenge

• Insufficient resources to fully implement the malaria National Strategic Plan.

Previous Key Recommended Actions

Objective	Action Item	Suggested completion timeframe	Progress	Comments - key activities/accomplishments since last quarterly report
Impact	Work to develop a plan of action to support the implementation of the Yaoundé declaration	Q4 2024		Following a joint orientation meeting by RBM, WHO and ALMA, DRC is working to outline the plan to develop their workplan to support the implementation of the Yaoundé declaration.

Reproductive, Maternal, Newborn, Adolescent and Child Health

Progress

Mali has significantly enhanced the tracking and accountability mechanisms with the development of a Reproductive, Maternal, Newborn, Child and Adolescent Health Scorecard and has published it on the ALMA Scorecard Hub.

Neglected Tropical Diseases

Progress

Progress in addressing Neglected Tropical Diseases (NTDs) in Mali is measured using a composite index calculated from preventive chemotherapy coverage achieved for lymphatic filariasis, onchocerciasis, schistosomiasis and trachoma. In 2022, preventive chemotherapy coverage was 100% for lymphatic filariasis, Soil transmitted helminthiasis and trachoma, and 74% for onchocerciasis, and 65% for schistosomiasis. Overall, the NTD preventive chemotherapy coverage index for Mali in 2022 is 86, which represents a very substantial increase compared with the 2021 index value of 25. The country reached WHO MDA targets in 2022 for three MDA NTDs.
